

REPORT
ON THE
REVISION OF SETTLEMENT
IN THE
KUMAON DISTRICT

CARRIED OUT BY

MR. J. O'B. BECKETT,

1863 1873.

PART I.

ALLAHABAD:

PRINTED AT THE NORTH-WESTERN PROVINCES GOVERNMENT PRESS.

1874.

FROM

C. H. T. CROSTHWAITE, Esq.,
Offg. Secy. to the Board of Revenue, N.-W. Provinces,

TO

THE OFFG. SECRETARY TO GOVERNMENT,
North-Western Provinces.

DATED ALLAHABAD, THE 14TH SEPTEMBER, 1875.

SIR,

DEPARTMENT I.
—
DEPARTMENT OF LAND
REVENUE.
—
Present
S. REID, Esq.,
Senior Member.

By request of the Senior Member, I have the honour to submit for the orders of Government, with the following review, the report by the Commissioner of Kumaun on the revision of the settlement of that district effected by Mr. J. O'B. Beckett, Settlement Officer. In the first paragraph of his report General Ramsay has explained why the settlement report was drawn up and submitted by the Commissioner, and not by the Settlement Officer.

2. Previous to the measurement preliminary to the recent revision of the settlement of Kumaun no field survey of the district had been attempted. In 1823 a "guess measurement" was made by native officials, who, seated on commanding positions, wrote down the names and areas of the estates (thoks) within sight or easy distance, and it was on these areas that the settlement then made was based. Besides the "guess measurement book of 1823," in which the boundaries and areas ascertained in the above rude fashion were recorded, a revenue-and-rent-roll was prepared showing how "the *pudhan* (*malguzar*) was to collect the revenue and where rent was due from *asamis*." At the last settlement, Mr. John Hallet Batten, Settlement Officer of Kumaun, compiled a detailed revenue-and-rent-roll (*asamtwar phant*), in which the quotas of revenue paid by shareholders and the rentals paid by the permanent tenants (*khalkars*) were entered. These statements were not altogether reliable, being prepared by the villagers themselves, whose object was to make themselves out to be as poor as possible, but they were of some use, and indirectly so, in teaching the people that they had rights capable of being defined and secured. Applications for a field measurement were constantly coming in. When the time for revision of settlement arrived the people were prepared for the field measurement of the whole district, and a number of qualified *amins* were available for the work.

3. The *khalsa* or field measurement was commenced in December, 1863, under Mr. Bazett Colvin's supervision, and was carried on by Mr. Beckett from May, 1865, to its completion (with the exception of the Bhot villages) in March, 1867. The system on which the measurement was made is described in para. 4 of the Commissioner's report. The land measured by the native surveyors was classified under three heads:—

1. Permanent cultivation.
2. Casual cultivation.
3. Waste.

The permanent cultivation was subdivided into—

1. Irrigated.
2. Dry land, first quality.
3. Dry land, second quality.

4. The native surveyors worked in pairs. One filled in the map and the other (his assistant) the field book. Disputes were noted in the "Remarks column of the

field book." At the same time a census of the village was made. The surveyor's work was tested by an officer (styled "partál amin") whose work was again examined by the "officer partál," by whom a report was submitted to a superintendent, and through him to the Settlement Officer. Waste lands intervening between the tracts cultivated either permanently or casually were not measured. The maps are therefore not village maps, but maps of the cultivated area of the village. The area of the fields even is not always correctly given, "as they are often of the most irregular shape and on the side of a steep hill." The measurement must therefore be accepted, the Commissioner writes, "as only an approximation, and the papers are more valuable as a record of right as regard fields than an accurate return of the area." But the maps, rude as they necessarily are, serve their purpose, and we have the Commissioner's assurance that there is no difficulty in finding out any field of the smallest size though it may contain only ten square yards.

No demarcation of village boundaries was made excepting where the boundary was (1) disputed, or (2) adjoining Government forest, or (3) land was taken out where the area was excessive. The papers of the last settlement gave a written description of the boundaries of each village. The present measurement supplies only the boundaries where the cultivation of one village adjoins the lands of its neighbour. The record of the map renders the erection of pillars unnecessary. When the amins found in the course of their survey that a dispute regarding a boundary existed, the disputed portion was coloured yellow in the map and a report was sent to the Settlement Officer. During the rains all these cases were brought up, and the headmen of the villages concerned were summoned by the Settlement Officer. They then (1) filed a *razi-nama*, or (2) agreed to settle the dispute by oath, or (3) appointed the Settlement Officer arbitrator, giving in a bond to abide by his decision. For two years the Settlement Officer was engaged chiefly in boundary work.

5. In the rains, when work could not be carried on in the field, the measuring parties were employed in preparing the *muntakhib* and *terij*, on which the fields in the cultivating holdings are thrown together. An extract (*parcha*) from the *muntakhib*, showing the fields, &c., in his holding was given to each cultivator. This plan, the Commissioner states, "enabled the Settlement Officer to rectify many mistakes at the time of settlement."

6. The areas were recorded in *bits* (4,800 square yards, or 40 square yards less than an acre) and *anas* (sixteenths of a *bísí*). The land cultivated, as stated in a preceding paragraph, was divided into—(1) irrigated; (2) dry land, first quality; (3) dry land, second quality; (4) *ijrdn* (casual cultivation). The dry land, second quality, was taken as the unit of quality, and the other descriptions of land were reduced to the standard of the unit by trebling the unit for irrigated, adding 50 per cent. for the first quality of dry land and taking half of the unit for casual cultivation (the last on the assumption that of the area casually cultivated only half was cultivated every year).

7. It may here be noted that "waste" in the statement given at page 7 of the report means "fallow," i. e., land which had been cultivated and which comes under the head of permanent cultivation, but was not cultivated during the year of measurement, or as the Commissioner explains,— "By waste is meant uncultivated terraced land, and does not refer to grassy slopes or forests included within the nominal boundaries of a village." Thus in the first example in the statement the sum total of the area under (1) irrigated; (2) dry land, I; and (3) dry land, II, is 84 B 8 A. But the cultivated area is put down at 68 B 8 A, and waste at 16 B. The cultivated area is obtained by deducting the area of waste from the area of the permanent cultivation: thus, 84 B 8 A—16 B=68 B 8 A.

8. In the absence of all such aids to assessment as *patwáris'* papers and previously recorded reliable data, the average yield of the different kinds of land was

ascertained as closely as possible. The process is explained in para. 7 of the report. It was found that the average yield of *an acre* (so in the report) of dry land, second quality, was as follows :—

				Rs.	a.
Rice,	23	8
Wheat,	22	8
Millet (mandua,)	20	8
Millet (mandua,)	20	8
Pulse (urd)	22	8

But these figures afford no clue to the *bisi* rate of 0-9-11, which is shown in the "remarks" column of the tabular statement in para. 7. This rate is the result of taking the sum of total area, which is put down in column 16 of Statement XIV. (page 109C) at 267,178 *bis* 7 *anas*, and the addition for value shown in column 29 of the same appendix, Rs. 1,05,155-8-0; and dividing by the total sum the product found by multiplying the proposed full jumma, Rs. 2,30,628 (column 15 of Appendix XIV., page 109C) by the revenue rate assumed by the Commissioner and the Settlement Collector, viz., one rupee (para. 7 of report), thus :—

Rs. 2,67,178-7

„ 1,05,155-8

Rs. 3,72,334 (as in column 31 of Appendix XIV.)

„ 3,72,334 : 2,30,638 :: 1 : 9 *anas* 11 *pies* (nearly.)

9. The Commissioner states that one rupee per *bisi* was the rate fixed in the second quality dry land. The Settlement Officer replies to a reference on this point that one rupee was his general assumed rate per acre of total measured area. But probably both mean the same thing, for the unit of measurement was an acre, and of valuation, an acre of dry land, second quality. (It may here be noted that the terms "acre" and "bisi" appear to be used indiscriminately, the latter being only .9 less than the former). As 9 *annas* 11 *pies* is the average revenue rate per *bisi* (or acre) on dry land, second quality, the average revenue rate on irrigated land will be $(0-9-11 \times 3) = 1-13-1$, and on dry land, first quality $(0-9-11 \times 0-4-11-5) = 0-14-10-5$.

10. The Commissioner's explanation of the several processes adopted by the Settlement Officer for working out a fair and equitable assessment will give some idea of the vast labour which Mr. Beckett expended in the work of revision of assessment. In Kumaun the density of the population varies very largely in different villages. Land without hands to till it is of no value. Mr. Beckett was therefore compelled to take population, as well as area and quality of soil, into his calculations. A painful and careful study of the Commissioner's comment and of the tabular statement in para. 7 of the report may result in a comprehension of Mr. Beckett's "mode of assessment." But it may be as well that some further explanation, which Mr. Beckett has kindly furnished demi-officially, should be given. At first starting the measurement papers gave the areas and the census papers the population. It was decided that the charge for an acre of the total area should be one rupee—that is, the measured area being (say) two lakhs of acres, the rental should be two lakhs of rupees. Therefore to arrive at a revenue of two lakhs, the rate in column 9 was Re. 1 per acre (to give two lakhs): and that in column 19 was 0-14-6 per acre, in column 20 at 0-13-6 per acre, and in column 21 at 0-13-7 per acre. The average population was :—

In column 9, 141 souls per hundred acres, representing Re. 1-0-0 per acre.				
Ditto 14, 195	ditto	ditto	„ 0-14-6	ditto.
Ditto 16, 184-8	ditto	ditto	„ 0-13-6	ditto.
Ditto 17, 188	ditto	ditto	„ 0-13-7	ditto.

} To give two lakhs of rupees.

Where the population of a village was less than the average, the population rental charge was proportionately less, and *vice versa*. Thus in example 4, page 7 of the

report, the population average is 159.3, or less than the average, 195; therefore the population rate per acre, instead of being 0-14-6, is 0-11-10. The land rate being a fixed one of 0-14-6 and the population rate being 0-11-10, the mean of the two rates $\frac{(i.e., 0-14-6 + 0-11-10)}{2}$ is only 0-13-2, as shown in column 28.

Another example, column 24. The population average is 154.6, or less than the average, (184.7); therefore the population rate per acre, instead of being 0-13-6, is 0-11-4; therefore the mean of the population rate (0-11-4) and the land rate (0-13-6) is 0-12-5, as shown in column 30. The population rate reduces or raises the average land rate by its fluctuations. Column 18 is made out in example 1, thus:

B. A.	B. A.
10-8 (of column 10)	$\times 2 = 21\ 0$, because 3 acres of 2nd class dry is equal to 1 acre watered.
41-8 (of column 11)	$\times \frac{1}{2} = 20\ 12$, because $1\frac{1}{2}$ acre of 2nd class dry is equal to 1 acre of 1st class dry.
	<u>41-12</u>

11. Mr. Beckett's objects in making out rates and average on three-fourths of the total area as well as on the total area (irrespective of the proportion of cultivated casual cultivation, &c.) was to enable him to check villages with a large amount of waste, so that he might enquire why it was so. The land might have been thrown out of cultivation with the view of getting a reduction at settlement, or it might be that the land was more than the people could cultivate, and some of it might be cut out and made Government waste.

12. At first sight it is not clear why the Settlement Officer wanted both columns 19 and 20, a *bisi* (or acre) of dry land, second quality, being the unit of assessment. Column 20 appears sufficient for all purposes. But Mr. Beckett explains that though practically column 20 is more useful than column 19, the latter is useful for the sake of comparison and to check the rates, as where columns 29 and 31 show a great difference, by looking to the cause of the difference either could be taken as a fair rent. Sometimes a large amount of *ijra*n is caused by the people not having sufficient manure to cultivate every year. This is particularly observable in Kāli Kumaun, where, from the cattle going down to the Bhābar, the supply of manure is insufficient: sometimes it is, because the land is too poor to stand successive cropping, or the cultivators are too few to cultivate the whole land for every crop.

13. The tabular statement at page 7 of the report demands deep study. Its inherent difficulty is not diminished by the fact that the three dots seen in many of its columns are intended to represent "ditto" in some and "nil" in other columns. *E.g.*, the dots in columns 22, 23, 24, and 25 must be read as "ditto." What they mean in column 38 it is not easy to divine.

14. The proposed jumma statement of para. 8 of the report is incorrect. Mr. Beckett has furnished two fresh statements of land revenue demands, the one for *khalsa* and the other for *sadabari* estates, which must be substituted for columns 2, 3, 4, 5, 6, and 7, *i.e.*, up to 1280 Fasli, the statement in para. 8. (They form Appendix 1 of this review). The jumma of the expiring settlement was Rs. 1,27,115 (Rs. 1,27,109-4-3). The figures in columns 3, 4, 5, 6, and 7 of the printed statement represent the new jummas, not the addition to the old jumma, nor are the old jummas given. For 1281 Fasli and following years the jummas are properly shown.

15. The total *khalsa* area is 267,178 *bis*is, and the total cultivated area 286,670 *bis*is. If the assumed rate had been levied on these areas the demand on the *khalsa* land would have been Rs. 2,67,178 in place of Rs. 2,30,628, and on the whole area Rs. 2,86,670 in place of Rs. 2,48,287-10. The difference is due to reduction in appeal and for special reasons.

16. The jumma on the *khalsa* land has risen from Rs. 1,27,109-4-3 to Rs. 2,30,628, or 81.43 per cent. (*i.e.*, by Rs. 1,03,518-4-9). In para. 9 the Commissioner has

explained the causes of this very great rise in the Government demand. But still the incidence of the jumma is very light. It comes to 11 annas 11 pie per *bist*. Mr. Beckett works out this rate as below :—

	Area.	Addition (for quality).
Watered, ...	25,472 11	+ 50,945 6
Dry, I, ...	1,08,420 5	+ 54,210 2
		<hr/>
Dry, II, ...	51,389 8	1,05,155 8
	<hr/>	
Total, ...	1,85,282 8	$\frac{1}{2}$ <i>ljrán</i> 20,162 14
		<hr/>
<i>ljrán</i> , ...	40,325 13	1,25,318 6
$1,85,282-8 + 1,25,318-6 = 3,10,600-14$		

$3,10,601 : 2,30,638 :: 1 : 11 \text{ annas } 10\cdot56 \text{ pie, or } \cdot 11 \text{ annas } 11 \text{ pie.}$

With an average yield valued at Rs. 21 from an acre of dry land, second quality, the average incidence of the Government demand on lands of all descriptions of only 11 annas 11 pie seems very light. General Ramsay writes :—“ I am quite satisfied that the assessments shown in the accompanying statements are light, though in consequence of their having raised so high compared with old jummas, I consider them sufficiently high.” Doubtless General Ramsay is right. Doubling the jumma is equivalent to a very considerable reduction in the payer's income. The irrigated khalsa land forms only 13·8 per cent. of the permanently cultivated khalsa area (*i. e.*, 25,472 out of 185,282 acres). The Commissioner mentions several causes which render cultivation in the hills more precarious than in the plains, where those causes do not exist, at any rate to the same extent, *viz.*, floods, landslips, cattle-disease, mortality among cultivators. The loss of *astanis* or cattle might, the Commissioner states, imperil the existence of a village, and light as the assessments are, prompt relief may often be necessary.

17. The cost of the revision of the settlement is estimated by the Commissioner at Rs. 3,08,537-15-10, to which must be added Rs. 1,600 (see para. 11), making the total expenditure Rs. 3,24,537, the jumma having been raised by Rs. 1,03,518. The cost of revision will be thus recouped in less than three years of full jumma. By the end of the sixth year after the revision had commenced the additional revenue amounted to Rs. 3,13,072, so that the cost of revision had been recovered by the end of 1281 Faslî, and the net additional income from the revision during the remaining 24 years of the settlement will amount to some Rs. 24,84,384. The actual cost of measurement is put down at Rs. 87,814. The area measured was 267,178 *bists*, excluding “ thousands of *bists* measured, but struck out by the Settlement Officer” (see para. 12 of report). The cost of measurement was Rs. 329 per 1,000 *bists*. General Ramsay explains that the fields are far smaller than in the plains. It must also be remembered that only the lands cultivated permanently or casually were measured, and that frequently the cultivation was very much scattered. Every field in the 6,333 villages of Kumaun had to be measured by yards (see para. 12). The villages are dispersed over 6,000 square miles. When we consider the facts above stated, and the very elaborate calculations which were worked out by Mr. Beckett with the view of obtaining a fair jumma, and that he inspected every village and heard and disposed of all objections, and settled a great many questions very important to the cultivators, although they frequently referred to fractions of a *bist* over this large tract of 6,000 square miles with its 6,333 villages; and finally, that Mr. Beckett was driven away from his post by illness brought on by over-work, and absent from the district 18 months, it will be understood that it was only by honest hard labour that the revision of the settlement was completed in about ten years.

18. From Appendix, Statement 2, it appears that 1,029 *bists* of revenue-free land were resumed at revision of settlement and assessed to a jumma of

Rs. 164-14-0, while 339 *bists* of *gunth* or temple lands hitherto revenue-free were assessed at an aggregate jumma of Rs. 99. There are 444 "temple assignments, whole or parts of villages, with a cultivated area of 9,476 *bists*, yielding Rs. 8,477." The *muáfi* grants are 92 in number, with an area of 3,297 *bists*. Their revenue estimated for the levy of the 10 per cent. cess came to Rs. 412. Most of the revenue-free grants are in the hands of Brahmans resident at or near Almora. The *sadabart pattis* assigned for the defrayment of the cost of gratuitous distribution of food among indigent pilgrims visiting the Badrináth and Kedarnáth temples yield a revenue of Rs. 5,800, which is expended under the management of a local agency, of which the *Rawuls* of Badrináth and Kedarnáth are members.

19. In para. 15 the Commissioner describes the boundaries and principal physical features of the district, which extends from the Rohilkhand taráí on the south to Thibet on the north, and from Garhwál on the west to Nipál on the east. The district is divided into 18 parganas, containing 119 pattis, with 4,470 maháls and 6,333 mauzas. Of the mauzas 92 are *muáfi*. In addition to these there are 19 fee-simple estates, 11 Government, and 210 waste and forest mauzas.

20. In paras. 17 to 21 of his report the Commissioner has noticed special points of local interest with reference to particular parganas and estates. He has shown the very great changes which certain tracts have undergone since Mr. Batten's settlement in 1846, when pargana Gangoli was "excessively jungly" and harassed by the visitation of tigers, and in some of the tracts near the river notorious man-eaters "were hardly ever absent, and at times the loss of human life was considerable, and few of the inhabitants were shikáris" (see Mr. Batten's report). Now the *feræ nature* have been completely conquered. Shikáris are abundant. Jungle has to a great extent disappeared and cultivation has much increased. The Benínig and other smaller tea-plantations employ a large number of men, and throw much more money into the pargana than it is required to pay in revenue.

21. In one pargana the price of wheat has risen from 40 to less than 20 seers for the rupee, owing to the Bhutia traders purchasing it at even a higher rate. In another the value of the land has risen fiftyfold.

22. The landed tenures, which differ very widely from those in the plains, have changed very considerably since Mr. Commissioner Traill's administration. Under the Gurkha government, "the paramount property in the soil rested with the sovereign, and not in theory only, for the unrestricted power of alienation was exercised at the will of the ruling power. Villages were given to astrologers, cooks, barbers and physicians; and the *asámis* in possession, whatever their former status, became to all intents and purposes the cultivators of the new owner." They were, after all, better off than the cultivators on the khalsa (Government) lands, who were exposed to the reactions of the Government officials and soldiers on all sides. When the district came under the British Government the revenue was realized through the *thokdars* or *syandás*, who under the Gurkha rule had been entrusted with the charge of the police in a certain number of villages, and were paid by certain fees levied on the village headmen. The greater *syandás* were the descendants of grantees and officers of the Gurkha times. Their ministerial duties consisted of reporting offences and the death of individuals without heirs, seizing criminals, &c.* A *mauzaibár* settlement was afterwards made by Mr. Traill, but even then the lease was often supposed to include the proprietary

* The status of the *padhán* is thus described by Mr. Traill (see Mr. Batten's report on the settlement of Garhwál):—"The *padhán* is the village ministerial officer entrusted with the collection of the Government demand and the supervision of the police of his village. He is commonly one of the village appointed with the approbation of the other joint sharers, and is removable for malversation or at the requisition of the majority of sharers. He collects the Government revenue from the co-sharers according to their several quotas. He pays also the rent of his own immediate share of the estate. He is remunerated by fees on marriages and a small portion of land set apart for the purpose. There is no hereditary claim or right to the situation of *padhán*, but generally the son succeeds without opposition, unless incapable from youth or want of talent, in which case the sharers are called upon to choose another *padhán* among themselves. Uncultivated lands which may not have been even subjected to division among the proprietors are managed by the *padhán*, and the rents yielded from their cultivation are accounted for by him to the body of proprietors, who take credit for the same in the quota of the Government cess to which they are respectively liable."

right in the land. Within the next twenty years, as the country grew in prosperity, the people began to assert their rights, and when Mr. Batten made his 20 years' settlement (in 1846), the distinction between the rights of proprietors, permanent tenants, and tenants-at-will was fully appreciated. It was left to the Revenue Courts to dispose of claims to these rights, and they were flooded with cases after Mr. Batten's settlement. "The subsequent litigation" (the Commissioner writes) "made great changes, and when Mr. Beckett came to the work of settlement he found that every one wished to be recorded as proprietor. The old generation had passed away; the existing one could not realize the position of their ancestors of 50 years before, and it was a very difficult work to determine the real character of many who claimed under Mr. Traill's settlement the measurement book of 1823, decree of court, or as relations of those who considered they had rights under any of these authorities. Mr. Beckett made every endeavour to put each man in his right place, and those who were dissatisfied were referred to the revenue courts."

23. The *khaikári* (permanent cultivators) tenure is peculiar to Kumaun and Garhwál. The *khaikár* is defined in Mr. Batten's glossary to be an old occupant non-proprietary cultivator, not infrequently the descendant of a *thatwán* (or original proprietor of the soil), who was superseded by a new grantee. He enjoys a hereditary but not a transferable right in the land he cultivates. In some parts of the district whole villages, of which in many cases their ancestors were formerly the proprietors, are in their possession. The non-resident proprietor has no power to interfere with them or their land, waste or cultivated. The proprietor receives from the *khaikárs* *malikána* (his old perquisites) commuted to a money payment ranging from 25 to 100 per cent. on the revenue, which together with the *malikána* is collected from the *khaikárs* by one of their number, styled a *ghar paután*, who, as remuneration for his trouble, is allowed to hold part of his land rent-free and is exempted from personal service, &c., (Mr. Batten's report, para. 21). "In fact" (General Ramsay writes) "these tenants are in all respects equal to proprietors, with the exception that they cannot sell their holdings, and they pay a small sum in addition to the quota of revenue due from the land recorded in their names."

24. Mr. Batten reported in 1846 that he found in Kumaun the following tenures :—

1. Pure pattidári.
2. Mixed pattidári.
3. Coparcenary zamindári.
4. Simple zamindári.

The two latter were the least common. General Ramsay, when he states that there is no tenure corresponding to what is known in the plains as zamindári, means by that term no such full and complete right in the soil and all it produces as allows the zamindár to sell the trees, kankar, &c., on the estate.

25. The state of cultivation in the best parganas has entirely changed since Mr. Traill's time. Taking the returns of total appropriated *bists* from Mr. Batten's report, which deals with a period some 30 years later than Mr. Traill's time, and comparing them with the entries in Appendix No. X. of the Commissioner's report, we find a very great increase in the amount of land taken up in several parganas.

Pargana.	Area in <i>bists</i> .	
	Mr. Batten's.	Mr. Beckett's.
Baramandal,	19,026	40,287
Dáupur,	12,196	24,406
Gangoli,	15,933	24,217
Pálli,	30,593	58,443

In other parganas again the appropriated area (if "appropriated" and "in possession" mean one and the same thing) has fallen off:—

Kali Kumaun,	41,501	39,739
Phalda Kot,	13,169	9,846
Sira,	13,329	7,915
Shor,	23,482	14,460

26. The total appropriated khalsa land at Mr. Batten's settlement was 172,912 *bists*. The area in possession of proprietors and permanent cultivators at Mr. Beckett's settlement was 297,850 *bists*. From this amount must be deducted the area in the sadabart pattis (6,431 *bists*) the muafi area (3,297 *bists*), and perhaps the holdings in fee simple (of which the area is not recorded). 241,669 *bists* are held by proprietors against 56,181 belonging to permanent tenants. The two classes number respectively 94,924 and 36,622. The latter are found chiefly in the Baramandal, Chaugarkha, Kāli Kumaun, and Pāli parganas. The average holding of the proprietors is 2.55 *bists*, and of the permanent tenants 1.53 *bists*. These last have been reduced so much in many cases from repeated division that the holders are frequently compelled to cultivate other land in their own or other villages as tenants-at-will. But there is plenty of land available and cultivation is increasing year by year. New clearings are made in jungle, terraces are built, and use is made of ravine water to wash down earth to form culturable land. The old cultivators holding temple lands have been recorded as proprietors, and apparently are allowed to sell their lands. The number of tenants-at-will (*sirthan asāmts*) or the extent of their holdings are not given separately from those of proprietors and permanent tenants.

27. The number of proprietors and permanent tenants of the several Hindu castes, Musalmans and Europeans, are as follows:—

						Proprietors.	Permanent tenants.
Brahman,	29,632	7,427
Rajpūt,	69,570	19,437

28. The perquisites formerly paid by the tenants to the proprietors have now been commuted to a *malikāna* payment of 25 per cent. on the revenue. The term *malikāna* is, it may be explained, not used by General Ramsay in the ordinary acceptation of the word, *i. e.*, not in the sense of an allowance made to a proprietor excluded from settlement, but as proprietary allowances and dues of all kinds. In addition to the payment fixed in commutation of such cesses as marriage fees, goats' legs, &c., a proprietary allowance was made out of the rental assessed on the permanent cultivators with whom the settlement was made. The *malikāna* payments fixed by Mr. Beckett were largely modified by General Ramsay, and the Senior Member considers on good and sufficient grounds. But this question has formed the subject of a separate correspondence between the Government, the Commissioner and the Board, and need not be discussed further in this place.

29. There is one point, however, mooted in that correspondence which has not been referred to in the Commissioner's report on the Kumaun Settlement, but which should be noticed in this review. It appears that in villages cultivated entirely by permanent tenants a full rental was assessed: of which a portion (never less than 50 per cent.) was credited to Government as land revenue, the balance going to the proprietors as *malikāna*. In villages cultivated entirely by proprietors a rental at

privileged rates is collected and credited as revenue. In villages cultivated partly by proprietors and partly by *khaikárs* the revenue is made up of (1) the rental at privileged rates of the lands held by proprietors, and (2) the full rental of the area cultivated by the *khaikárs* minus the *malikána* allowance. The Commissioner, in reply to the Board's enquiry as to the principle or rule on which the privileged rates were calculated, replied that he was not prepared to "give any defined procedure by which the rental taken from cultivating proprietors was calculated on a lower scale than the rental taken from cultivators. The Settlement Officer was tied down by no fixed rules. Good soil might be rendered comparatively worthless by climate or the ravages of wild animals."

30. The revenue fixed on the Bhutia villages is calculated not on their land only, which is of little value, but on their profits generally. "It is quite fair" (the Commissioner contends) "that they should pay, because they occupy an immense tract of country to the exclusion of all others. For six months they graze their sheep and cattle all over the country. They have the benefit of the roads and bridges made at a great expence, and with these advantages they make great profits, while they pay almost *nil* to the Thibet Government." As these profits fluctuate very considerably, and they frequently lose largely from murrain among the sheep, the villagers are allowed to make their own distribution of the *jumma* other than that which comes under the head of land revenue. In the absence of murrain they can pay the Government demand with ease, but remissions must be made, the Commissioner is of opinion, when there has been extensive mortality among the sheep. The Bhutia villages lie in pargana Johar, north of the outer snowy range on the banks of the Goré river. They bring down borax and salt from the upper villages and carry up grain and *gur*. Bagesar is the chief mart for the trade in borax, which to the value of Rs. 3,00,000 is imported from Thibet; of later years a good deal of it is brought down by the Bhutias to Ramnagar and Barmdeo.

31. The cost of education, postal arrangement and *patwáris'* salaries are defrayed from the 10 per cent. cess. The vernacular schools are fairly popular, the average daily attendance of boys per school being about 20. There are 99 village schools and six tahsili schools in the district. The postal arrangements extend over an area of 6,000 square miles. "The certainty of information coming from all parts of the district keeps the *patwáris* and the rural police up to their work" (para. 35). The *patwári's* functions differ very widely from those of his brother in the plains. The latter is the village accountant. The former, with an average circle of 50 square miles, and an average revenue of Rs. 2,500, is entrusted with multifarious duties. Through him the police arrangements are carried out. He collects the revenue, makes land measurements wherever necessary, looks after the repair of district roads, executes decrees relating to landed property, arranges for supplies to travellers, has to procure coolies, and, lastly, keeps the district officer acquainted with all that is going on. There are 91 *patwáris*, some of whom get Rs. 10 per mensem from the 10 per cent. cess, from which fund Rs. 5 per mensem are given to such of the old *patwáris* on the tahsil establishment as are able to do survey work.

32. There are no village watchmen (*chaukidárs*) in Kumaun, nor, excepting at Naini Tal, Ránikhet and Champawat, is there any regular police. A few chaprassis attached to the courts and tahsils, do, however, police work in the way of escorting prisoners and apprehending criminals with the assistance of the *thokdars* and *padhás*; the latter are bound to apprehend criminals in heinous cases, to report crime to the *patwári*, and arrange for the safe transport and custody of the Government revenue to Almora. The *thokdár* must report to the *patwári* any serious crime when the *padhán* has failed to do so. General Ramsay is satisfied that the Kumaun police system works better than any other in India, and that it would be most unwise to interfere with it. The services of *thokdárs* have been found to be indispensable. In 1836 it was proposed to do without them, but further experience has taught the

Commissioner that the *thokdárs* must be maintained. Their dues had been reduced to 3 per cent. by an order issued by Mr. Traill, which was, however, seldom carried out. They were raised by the Commissioner in consultation with the Settlement Officer, to 10 and 6 per cent. The burden on the villagers was not increased, as the *thokdári* dues were deducted from the Government demand assessed by the Settlement Officer. "In reality," (the Commissioner writes) "if the *thokdárs* had been given dues at first the Government jummas would have been so much less, and the fact of the extra *thokdári* dues having been given at the end instead of during the settlement makes no difference in the *jummabandī*." The sum required to meet these dues was Rs. 2,156-4-0.

33. It was found advisable to reduce the number of the village headmen (*padhāns*); their position with relation to their co-sharers is very much that of the *hambardárs* of the plains. Their services are remunerated by rent-free holdings styled *padhānchāri*, and when such land is insufficient, or there was none, 5 per cent. on the jumma was allowed. *Ghar padhāns* were appointed from among the *khaikārs* in mauzas in which the proprietors were non-residents and the village was held by permanent cultivators. The *ghar padhān* holds part of his land rent-free.

34. The agricultural population of Kumaun has increased by 12·8 per cent. (from 360,011 to 406,042) within the last twenty years. The Commissioner gives the returns of the census of—

1. 1852.
2. Settlement.
3. 1871.

The second was made by the *amins* as they measured the lands of the village, and necessarily extended over several years. Taking the cultivated area at 286,670 acres, the population comes to 1·4 per acre of cultivation. General Ramsay considers that the census returns of 1871 do not show the whole population, as he believes that no travellers were included, so that all who were on journeys in the interior of the hills, or employed in the forests or otherwise in the Bhabār, were not reckoned, as well as those who at the time were located in the Tarāi.

35. Rice (of which the finest qualities are produced), wheat and millét (*mandua*) are the principal crops in Kumaun. Turmeric is largely exported. It is grown extensively in the lower hills and sold at Haldwāni, Rāmnagar, Bārmdeo, &c. Its price has risen from Rs. 2 (in Mr. Traill's time) to Rs. 6 a maund. Almora, Rānikhet, and Naini Tal are supplied with grain from below. Very little grain is exported from the hills. Any surplus produce is kept in store.

36. There are now in Kumaun 19 fee-simple estates, four grants, and 39 assessed villages in the hands of tea-planters. The first have an aggregate area of 13,942 bāsis, purchased at a cost of Rs. 32,389, and assessed at Rs. 182 to the 10 per cent. cess, the cess being calculated at 10 per cent. on the amount given by 4 per cent. on the purchase money. But 10 per cent. in 4 per cent. of Rs. 32,389 is Rs. 129-8-0.

37. Thirty-three sites have been set apart by Mr. Beckett for tea-plantations. Their areas are given only in a few instances. General Ramsay objects to many of them as being small. "In my opinion" (he writes) "it would be far better for a tea-planter to purchase a village with extensive pasturage ground than to attempt high cultivation at a small area, where manure in sufficient quantity would not be procurable. Small villages with large tracts of jungle attached might be purchased in Kālī Kumaun, Gangoli, Dhānirio and other parts."

38. General Ramsay bears testimony to the immense benefits which the enterprise of tea-planters and companies has conferred on the district. "Deserts" have been changed into prosperous tracts. A very large amount of money has been thrown into the country. The tea-planters are good masters. There is a marked improvement in the condition of the people and in their houses. The prospects of tea-planting after

a long term of hard struggle and discouragement are now encouraging. "The difficulty of disposing of their produce was what hampered the planters. Now purchasers come to their doors and readily make engagements for future years at prices which, I believe, are remunerative." There is, General Ramsay trusts, "a good hope not only of existing plantations yielding a satisfactory return, but that other capitalists may be encouraged by their success to establish new plantations, and that the time has now come when the planters may reap the reward of their patience and industry."

39. The presence of two large sanatoria (Naini Tal and Ránikhet) exercises a very great influence on the well-being of the district. They are large markets for both labour and agricultural produce. "A man would probably pay the whole of his quota of revenue by carrying a load from Almora to Naini Tal and back, or by working a week between Naini Tal and Káládbúngi or at Ránikhet, or by serving a fortnight on a tea-plantation. In the vicinity of Ránikhet the villages could pay their revenue by selling their chaff and rice-straw. Milk has a fabulous price at all the stations. Vegetables and fruit sell equally well, fruit being eagerly bought."

40. General Ramsay has put the question of the respective rights of Government and of the village proprietors to the waste lands very fairly. The right of the Government is paramount. "The Government has a right to preserve forests where necessary, or to dispose of waste land in excess of what the villages require." At the same time the village proprietors have a prescriptive right to pasturage grass, timber, &c., and even to grazing dues from outsiders, who feed their cattle on the grazing lands within the village boundaries. All that the zemindárs, however, can claim *outside* their cultivation is a fair amount of culturable waste, with sufficient grazing and jungle land to give them pasturage for their cattle, timber for the construction and repair of their houses and agricultural implements and fuel. This question was forced on the attention of Government by the numerous applications for tea lands. It thus became necessary to demarcate the lands for which application was made and to determine whether the lands could be granted—that is, whether the Government would exercise its rights as lord paramount, with due regard to the prescriptive rights of the village proprietors. "If the tea-planting question had never been raised, it is obvious" (General Ramsay remarked in submitting the report on the recent settlement of Garhwál) "from the past fiscal history of the province, and from all which has hitherto been placed on record, that the tendency of actual demarcated limitation to the extension of tillage and clearing would be to retard such agricultural progress among the present occupants of the soil. But the plantation question having been raised, such a new element of value and importance have been introduced into the country as to counterbalance all the advantages of non-interference,—that is, of having the rights of the State and the people commingled and undivided throughout the greater part of the mountain tract." Of course there can be no doubt that if the village proprietors and cultivators had been shut out from the culturable waste, within which they had up to that time been entitled to take up new land as they pleased, a smaller area would have been brought under cultivation. And indeed there was no necessity for such demarcation so long as the land was required neither by Government preserved forest or by applicants for tea lands. Any disadvantages which might possibly have resulted from limiting the area within which the village proprietors might break up new land was more than counterbalanced by the benefits which would follow the introduction of capital into the district,—benefits which would fall principally to those who might have been affected by the restriction of the village area within narrower limits.

41. The Commissioner has pointed out that the tracts which are easiest of access and which yield the least difficult and most profitable returns to industry are not available to the English settler. They are already occupied, and the climate, moreover, is not suitable to the European constitution. But though the tea-planter must be content with a location in the less accessible and more thinly populated parts of the country,

he has his compensation in a better climate, and the demand has been found by experience to create a supply of labour. "More than 1,000 pahúris" (General Ramsay writes) "are drawing monthly wages in Kuthyur in Kumaun, the very patts described by Mr. Batten in 1841 as being waste, and therefore the most available for the experiment of tea-growing."

42. Kumaun presents all varieties of climate at altitudes ranging from 1,000 to 1,200 feet above the sea. The heat in the low valleys is great and malaria is rife; even at the higher elevations there is much sickness owing to the filthy condition of the villages. General Ramsay notes that the villages are not as filthy as they used to be, but that there is still much room for improvement. *Mahámari* now rarely appears and typhoid fever is less common. Small-pox has almost died out, while inoculation has disappeared owing to the benevolent and successful exertions of Dr. Pearson and his staff.

43. Cattle-disease is frequent and fatal, owing chiefly to the apathy of the people. The price of cattle and of *gli* has gone up 100 per cent. and more since Mr. Traill's time.

44. Wild animals are rapidly disappearing before the extension of cultivation, but bears are still numerous wherever there are large forests. In thirteen years rewards aggregating Rs. 20,413 has been paid away for the destruction of 3,886 full-grown and 1,348 cub tigers, leopards, and bears, exclusive of Rs. 283, special rewards for four man-eating tigers in 1860 and 1866. In twelve years 218 male, and 259 females met their death from wild beasts, the yearly average being 18.2 for the former and 21.6 for the latter.

45. The road communications have been greatly improved of late years. There are cart-roads to Almora, via Ranikhet, and to Naini Tal from the foot of the hills. All the important parts of the district are connected with Almora by good bridle roads, while fair bridle roads are within reach of all the tea-plantations. The important lines of road are kept up by Government together with all bridges requiring skilled labour. The district roads are kept in repair by the villages within reasonable distance, among which they are divided off. The *patwári* or a *jamadár* is entrusted with the duty of seeing the repairs done, and if they are not done, the cost of doing them by paid coolies is realized from the village or fee-simple estate which has neglected its duty.

46. Though copper and iron abound, yet owing to the absence of professional knowledge, the distance of the mines from good markets, the rise in the price of grain, and the demand for labour in the tea-plantations, only sufficient iron and copper are produced for local consumption. "Labour" (General Ramsay writes) "is expensive, and English copper can be bought at a cheaper rate in the Almora bazar than the local miners can produce it with profit."

47. General Ramsay is probably right in holding that Kumaunis are better off than any other peasantry in the whole of India. While no money is sent down to the plains, 20 lakhs have been remitted to and spent in Kumaun in each of the last three years; the revenue demand is so light that "a man would probably pay the whole of his quota of revenue by carrying a load from Almora to Naini Tal and back,"—that is, by three days' labour. In the hopeful prospects of tea cultivation there is a promise of increasing prosperity among the people. The agricultural population is almost entirely Hindu and principally Rajpút. The Brahmans are losing their influence, and the social position of the Dums has greatly improved.

Exclusive piscary rights exist only on the western Rám-ganga in pargana Páli.

48. The population being almost entirely agricultural, there are no manufactures of note. Blankets, hempen bags and a small quantity of the coarsest cotton cloth was made for home use. The implements of husbandry are of the rudest description.

49. General Ramsay has it very much at heart that mill-rents should be regarded as part of the land-revenue, which he maintains they are not, but that they

should be treated as a "local fund" asset, and thus be made available for useful local objects, such as the provision of medicines, the erection of rest-houses, and the extension of irrigation works. The last would be of great benefit to the people and would also be remunerative. The Senior Member is disposed to think that the people might have been allowed to erect and to work, free of charge, mills on the banks of the small streams and ravines within the boundaries of their villages. But the local authorities, acting on their experience of the country, have thought it advisable to recognize rights in mills by the exaction of small rents, with the view of preventing disputes and of protecting the weak against their more powerful neighbours. The Senior Member begs to support General Ramsay's recommendation. The income derived from mill-rents amounts only to Rs. 10,304.

50. The Senior Member is aware that His Honor does not require to be informed of Mr. Beckett's merits as a public officer, or of the difficult and arduous character of settlement work in a country like Kumaun. But he must express his most hearty concurrence in General Ramsay's estimate of Mr. Beckett's labours, of which the amount of the land-revenue, the result of his assessment, would furnish a very inadequate idea. Their nature and extent may be appreciated and understood from the explanation of Mr. Beckett's *modus operandi* given in para. 7 of the Commissioner's report.

47. In conclusion, the Senior Member recommends that the revised assessment of the land-revenue of Kumaun now reported be sanctioned for the whole district (as proposed by the Commissioner in para. 8 of his report) for a term of thirty years commencing from 1276 Fasli.

I have the honour to be,

SIR,

Your most obedient servant,

C. H. T. CROSTHWAITE,

Offg. Secretary.

REPORT
ON THE
SETTLEMENT OF KUMAON DISTRICT.

No. 223 OF 1874.

FROM

MAJOR-GENERAL H. RAMSAY, C.B.,
Commissioner of the Kumaon Division,

TO

E. C. BUCK, Esq.,
Offg. Secretary to the Board of Revenue, N.-W. P.

DATED CAMP HULDWANEE, THE 7TH MARCH, 1874.

SIR,

MR. BECKETT'S health has, I am sorry to say, compelled him to proceed at once to England before he could submit his final settlement report for the Kumaon District. The statements were nearly all ready, and Mr. Beckett had made rough notes from which his report would have been prepared; but as we arranged all general principles before the settlement commenced, and consulted freely how to meet difficulties as they occurred, I have from the first been acquainted with Mr. Beckett's work under report; and having seen some of the papers of almost every village in the district, I hope I shall be able to represent his views generally. Before he left, I discussed with him all the particulars which will here be brought under the notice of the Board; and as all alterations ordered on appeal have been made in the statements now submitted, this may be considered our joint report.

Explains why the Settlement Officer does not send his own report.

I regret extremely that after Mr. Beckett's five years of incessant hard work since his return from sick leave to England, I should have to commence this report by stating that he has again lost his health, and been obliged to go home suddenly, before his work could be reported.

2. It would be superfluous to allude here to the many interesting details usually given in settlement reports, because full information regarding history, snowy mountains, civil and military stations, temples, lakes, geology, wild animals, buildings, and every other subject of interest, had been collected from the admirable reports of my predecessors, Messrs. Traill and Batten, as well as from every other available source, and will soon appear at length in the valuable *Gazetteer* now being prepared by Mr. Atkinson; I shall therefore confine myself to the briefest notice of all matters that are not closely connected with the subject immediately under report, *i. e.*, the revision of settlement in Kumaon for the ninth time.

Report confined to matters connected with revision of settlement.

3. The revision of settlement in a district like Kumaon is quite different from the work usually done by Settlement Officers in the plains. Average pergunnah rates, rent-rates, putwarees' village papers, and the other aids available in almost every district that comes under re-settlement, had no existence in Kumaon. The only record of any kind, as regards area, was the guess measurement book of 1823; and the only paper of last settlement giving any details connected with the payment of revenue or rent was the "*phurd phant*" or revenue and rent-roll, which showed how the *pudhan* (*malgoosar*) was to collect the revenue, and where rent was due from *assamees*. But the former paper was of little use except as regards boundaries. It was prepared in 1823 by native officials, who sat on commanding positions and summoned the *pudhans* of all villages within sight or easy distance, when they wrote down from their information the names of the *thokes* of land and their areas; and on these estimated areas all subsequent settlements were based. But even this was a vast improvement on the utter blank of former times.

Ninth revision.

Revision of settlement in the hills why so different from that in the plains.

of-rights at last
ment, its charac-

At the last or 20 years' settlement Mr. J. H. Batten is entitled to the credit of having created the *assameewar phant* which was supposed to show the shareholders and *khaikurs* (permanent tenants), and the quotas of revenue or rent paid by each. But these papers were prepared by the villagers themselves. Their object being to conceal their numbers, and make their villages appear as poor as possible, the revenue was divided among a very few of the shareholders in the *phurd phant*; and, except where the *khaikurs* were on bad terms with the proprietors, a very large portion of the tenants was omitted. It could not have been otherwise, as Mr. Batten had charge of the district while he revised the settlement; his establishment was no more than sufficient for the proper work of the office, and he was only able to call for information from those who derived most benefit by withholding the real state of the case.

educating influence on
the people of the last
settlement.

The useful *phurd phant* which Mr. Batten did give prepared the way for more accurate details. The people acquired the knowledge that they had some rights capable of being defined and secured. They learned by degrees to assert those rights; and in their ascertainment they applied for field measurement. Before the close of the 20 years' settlement a great many villages had been measured in the adjustment of disputes; a large number of qualified ameens was educated for the work; the minds of the people were familiarized with *khusrah* measurement, and quite prepared to accept it as the basis of a new settlement; and thus they were by degrees educated to think that their rights ought to be correctly recorded, and for this purpose fully ascertained. This led to the necessity of a *khusrah* survey, which brought to light the actual area under cultivation, hitherto unknown, and supplied information from which a correct record could be prepared; and all this with the willing co-operation of the people.

Settlement based on a
khusrah survey impos-
sible 30 years ago.

In the backward state of the country, and the comparative poverty as well as ignorance of the people, I consider it would have been impossible to have made a settlement on the basis of the *khusrah* survey 30 years ago; and without the aid of Mr. Batten's *phurd phant* we probably could not have introduced it now without difficulty.

Survey—principles and
procedure.

4. The measurement was commenced by Mr. B. W. Colvin in November, 1863, under the sanction of Government orders received with the Board's No. 48, dated 4th September, 1863. He left the hills in the spring of 1865, on getting a district in the plains, and the work was completed under the direction of Mr. Bockett, who has resettled the whole of the district.

The measurement was carried out on these principles:—

First,—All terraced land was to be measured, unless it had relapsed into forest; but forest clearings, and slopes cultivated only after a lapse of eight or ten years, known as *khil* or "*kanula*," were not to be measured. Each field to be measured separately.

Second,—The whole of the terraced land to be shown under four qualities—(1) irrigated, (2) good unirrigated, (3) second-rate unirrigated, and (4) casual cultivation (*ijran*).

The ameens and the villagers did not correctly observe these rules, and all the land included in the measurement was afterwards classified under the headings of—

- (1) Permanent cultivation,
- (2) Casual cultivation (*ijran*), and
- (3) Waste.

"Waste" as meant in the
classification.

By "waste" is meant uncultivated terraced land, and does not refer to grassy slopes or forests included within the nominal boundaries of a village.

A measuring party.

A certain tract was made over to a measuring party, which consisted of one superintendent and clerk, officer portal, portal ameens, pairs of ameens with one chain-man to each pair, the other being given by the village.

The superintendent sent out his ameens, who were supplied with hempen ropes sixty feet long, and marked off into six feet lengths. One ameen on Rs. 12 per mensem made the map, on a scale of $\frac{1}{4}$ -inch to a chain,—intervening waste plots being merely shown, but not measured. The second ameen, Rs. 10, who acted as assistant, filled in the *khusrak*.

Its work detailed.

Any disputes that occurred were entered in the column of remarks. The ameens also prepared a census of the village. This return, with the completed map and *khusrak*, was sent to the superintendent, who marked a number of fields with blue chalk, and deputed a purtal ameen to test the measurement and the records of ownership, tenants, &c. The purtal ameen returned the papers with a written report to the superintendent, who made them over to an officer purtal. He tested the work a second time, and returned the papers with his written report. According to the reports of these two men the measurement papers were accepted or rejected, or submitted to the Settlement Officer.

When it is taken into consideration that the fields are often of the most irregular shapes on the side of a steep hill, the measurement must be accepted as only an approximation, and the papers are more valuable as a record-of-right as regards fields than an accurate return of the area.

Accuracy difficult.

The superintendent was expected to move about among his ameen parties, to closely their work, and report men whom he considered, from any cause, incompetent.

His Honor the Lieutenant-Governor and the members of the Board have seen many of these village survey papers, and Sir W. Muir, when member of the Board, tested the similar work in Gurhwal. I consider that the work has been admirably done. Every field has been measured and shown in the map separately; many villages contain as many as 6,000 numbers, and yet there is no difficulty in finding out any field of the smallest size, though it contain only ten square yards.

Character of the work.

During the rains the measuring parties were employed in drawing out the *moon-takhib* and *teerij* of the villages measured in the working season, and in preparing schedules of holdings for each *assamee* named in the *khusrak*. These last were at once distributed.

Employment during the rains.

On the completion of the papers of a *puttee*, a *mouzalwar* abstract was made, giving all the information obtained as regards land and population; and this was entered in Mr. Beckett's book.

5. The schedule of holding given to every one named in the measurement papers known as *purcha*, made every *assamee* aware of the action of the ameens or others in regard to his land; and, if he took the trouble to know what was in it, qualified him to expose any roguery or incorrect entries before the papers passed out of the Settlement Officer's hands. It was so easy to compare the number of fields with entries in *purchas*, as regards quality or quantity, and, if there was ground for suspicion, to have them measured, that any one is inexcusable who remained silent and afterwards pleaded that his land had not been properly recorded. At any rate, this was the most likely way of making every *assamee* acquainted with his recorded possession; and the information thus imparted enabled the Settlement Officer to rectify many mistakes at the time of settlement.

Schedule of holding.

The use of the *purcha*, or schedule of holding.

The usual way of making a *tuhseeldar* or other subordinate communicate the result of measurement to *assamees*, by reading over the numbers and names in *khusrak*, would have been a farce,—it would have been no check, and could have given no information. By placing in the hands of every cultivator, except tenants-at-will, a list of the fields, and their size, recorded in his name, it could only be wilful and culpable

ignorance if he did not know before settlement if his rights had been correctly recorded.

Assessable area.

Quality.

Reduction to one standard.

6. The area of 1823, assumed as the assessable area in former settlements, as well as jummas of 20 years' settlement, were entered in Mr. Beckett's book, and he was able thus to see the prevailing rates per *beesee* (acre) under the old settlement, as well as according to the actual measured area. But before considering any other feature connected with the assessment, it was necessary to ascertain the quality as well as the quantity of land to be assessed; and the whole was reduced to one standard, i. e., to that of second-rate unirrigated land, known in the hills as *doweem oopraon*. The whole of the land subject to assessment in any village must come under one, or some, or all of the four heads—(1) irrigated, (2) first quality dry land, (3) second quality dry land, and (4) *ijran* (or casual cultivation). These were all reduced to the standard of No. 3, by trebling No. 1 (irrigated), by adding 50 per cent. to No. 2 (first quality dry land), and reducing No. 4 (*ijran*) to one-half.

For example:—

10	<i>Beesees</i> , irrigated, = 30
12	Ditto 1st quality, unirrigated, = 18
12	Ditto 2nd ditto, ditto, = 12
12	Ditto <i>ijran</i> , = 6
= <i>Beesees</i> 2nd quality unirrigated land, ...		66

and this calculation showed that, according to the measurement returns, the assessable area on this basis was equal to 66 acres of second quality unirrigated land.

Calculation of average rates.

Average produce.

7. As there were no putwarces' papers, rent-rates, or other previously recorded data from which information could be obtained, every endeavour was made to find the average yield of the different kinds of land. In irrigated land it is very common for the proprietor to take half of the gross produce; in first quality unirrigated land, it is usual to take a third; while in second rate unirrigated land, a fourth or a fifth of the gross produce is taken. The yield of a *beesee* of course varies much, according to position, land, culture, &c. In some places the best irrigated land gives as much as 60 maunds of *dhan* (rice in husk) per acre: 40 maunds is a common yield. Good first quality dry land in some places gives more than 20 maunds of wheat, or as much of *mundooa* (millet). In a village of pergunnah Gungolee, Mr. Beckett satisfied himself that an acre of first quality unirrigated land actually yielded 24 maunds of wheat (weighed). But this was unusually good.

It was ascertained in many ways that the following table fairly represents the average yield of the important crops grown in the hills. In a very unfavourable year it might be less: in a good season it would be very much in excess of what is given:—

Kind of grain.	Average yield per acre.			Average money value.			REMARKS.
	Irrigated.	1st quality dry land.	2nd quality dry land.	Of produce of 2nd quality dry.	Add half for 2nd crop wheat.	Total.	
	Mds.	Mds.	Mds. seers.	Rs. a. p.	Rs. a. p.	Rs. a. p.	
<i>Dhan</i> (rice,) ...	20	12	8 @ 20	16 0 0	7 8 0	23 8 0	Rate per <i>beesee</i> 2nd quality Be. 0-9-11.
Wheat, ...	16	12	6 @ 16	15 0 0	7 8 0	22 8 0	
<i>Mundooa</i> ,	16	10 @ 30	13 0 0	7 8 0	20 8 0	
<i>Mandira</i> ,	16	10 @ 30	13 0 0	7 8 0	20 8 0	
Pulse (<i>oord</i>)	10	6 @ 16	15 0 0	7 8 0	22 8 0	

Land is left fallow for one crop every second year, and in the second money column I have only given the return of half an acre. The total shows what may be considered the average yield in one year of an acre of the second quality (dry) land, to which standard all was reduced in calculating the assessment. No doubt, in some very bad fields the return in an unfavourable season will be less than has been given; but it is simply impossible to estimate the outturn of every field. Where the land was exceptionally bad its poverty was taken into consideration with the many other causes that affected the assessment.

But putting aside all special causes, Mr. Beckett and I agreed that, by giving up a great deal on the good land, irrigated and unirrigated, which would counterbalance any defect in especially bad land, Re. 1 per *beesee*, second quality dry land, would not be too much to assume as the standard rate.

One rupee deducted as an average rate per acre.

I may here observe that as a rule the good and bad land is so divided that each proprietor has a fair share of the second quality as well as of the others; consequently he has the advantage of the low rate placed on good land. Mr. Traill's assessment in 1823 gave a revenue rate of Re. 0-12-2 per *beesee*; Mr. Batten's revenue in 1842 is given at Re. 1-6-0 in Ramgurbh, Re. 1-3-5 in Palee, Re. 1-0-11 in Baramandal, and Re. 0-11-9 per *beesee* on cultivation for the entire district; the proposed settlement rate now is Re. 0-13-10 per *beesee* on total *malgoozaree* area. The following statement shows what rates were supposed to have prevailed under former settlements, the actual rate of the Gurhwal settlement, and that proposed for Kumaon. Kumaon was always able to pay a much higher rate than Gurhwal, and I do not know why the latter was ever theoretically assessed higher than Kumaon:—

Comparison of former and present rates;

and with those of Gurhwal.

Mr. Traill's rate per <i>beesee</i> on total cultivation.		Mr. Batten's rate per <i>beesee</i> on total cultivation.		Present assessment on total cultivation.	Proposed assessment in Kumaon.		
Gurhwal.	Kumaon.	Gurhwal.	Kumaon.	Gurhwal.	Rate per <i>beesee</i> or <i>malgoozaree</i> area.	Rate per <i>beesee</i> on cultivation.	Rate per <i>beesee</i> standard on second-rate unirrigated land.
Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
1 7 6	0 12 9	1 1 2	0 11 9	0 12 7	0 13 10	1 8 11	0 9 11

Since 1842 the country has undergone a great change. The people have become rich by the vast amount of money spent in the district, the price of grain has doubled in some places, in others trebled. Taking these facts into consideration, we assumed one rupee as a fair average revenue-rate per acre on second quality unirrigated land; and on this rate, in connection with other circumstances, and any exceptional causes, which were duly taken into account at the settlement of every village, all assessments were calculated.

Other considerations which the average rate was fixed.

Another very important feature to be considered was the population.

Population.

In some parts of the district land was in abundance, but there were few inhabitants. Under such circumstances land is of little value. In some places it was still a struggle between man and beast, and the population was so important an item in estimating the *jumma* of a village, that Mr. Beckett valued it equally with land.

Population an important element in calculating average rates.

He first ascertained—(1) the population average per 100 acres of the actual measured area for the whole district, (2) the population average per 100 acres of the cultivated area, also (3) for the cultivated area with half of the *ijran*, and (4) on three-fourths of the total area. For example—under No. 1 the population average being 141, a village with a population of 70 per 100 acres would give a population rate of eight annas; the land rate would be one rupee; and the mean of these two, twelve annas, which would be an average rate. Had the population of the village been 280, the

How this test was applied.

population-rate would have been Rs. 2, the revenue-rate being Re. 1; the mean of these, Re. 1-8-0, would be the average rate. In both cases, of course, the jumma thus ascertained would be subject to further consideration in connection with existing circumstances.

Population-rates.

In the same way, in No. 2 the population average being 195 per 100 acres, and the revenue-rate only Re. 0-14-6 per acre, a population of 98 would give a population-rate of Re. 0-7-3, and the mean of the two would be eleven annas.

Under the third calculation the population average being 185 per 100 acres, and the revenue-rate Re. 0-13-6, if the population were 92, the population-rate would be Re. 0-6-9, and the mean, ten annas.

Land tables.

Mr. Beckett prepared tables showing the real state of the land in every village in four different ways, and a comparison of these guided him in determining the average jumma: No. 1 included all land that had been measured by the villagers; No. 2 contained only cultivated land + the addition for quality, *i. e.*, the number of *beesees* reduced to second quality; No. 3 contained the same as above + half of *ijran* (casual cultivation); No. 4 contained three-fourths of No. 1 + addition for quality.

Structure and uses of these land tables.

Excess in No. 1 over No. 3 showed that there was much waste land. Excess in No. 2 over No. 3 showed a large proportion of permanent cultivation. If No. 2 exceeded No. 1, it would show that the land was exceptionally good, or that there was an unusual quantity of cultivation. Excess of No. 3 over No. 2 would indicate too much *ijran*. Excess of No. 4 over No. 3 would show much waste; and if No. 4 exceeded No. 1, it would show that the land was good.

Example. :

A statement showing six villages of the same area, composed of the different qualities of land, and different states of cultivation, is annexed. This explains in figures and results how, independent of special causes, the different qualities are at once checked by these calculations, and how they affect the *jummas*. The cases given in this statement are imaginary, and the different kinds of land are shown in unusual proportions to explain the principle clearly. It would be almost impossible to find villages, with the populations given in Nos. 5 and 6, with so little cultivation:—

Illustrations.

Assuming the revenue-rate at Re. 1 per *beesee* on total area shown in No. 1, Nos. 2, 3 and 4 to realize the amount stated in No. 1 give the incidence per acre of Rs. 0-14-6 for No. 2, and Rs. 0-13-6 for Nos. 3 and 4. The average population per 100 *beesees* on the area of No. 1 is 141, on No. 2 it is 195, and on Nos. 3 and 4 it is 185. These population averages of 141, 195 and 185 represent a revenue-rate of Re. 1 for the first, Re. 0-14-6 for the second, and Re. 0-13-6 each for the third and fourth. When the population of a village varies from the average, the revenue-rate deduced from the population will vary accordingly; but the assumed rate on the land being a constant one, a mean was taken between the revenue-rate and the population-rate.

The table prepared by Mr. Beckett gave full information regarding land and population-rates, and enabled him at a glance to see what, on these calculations, the average rate ought to be.

Complete data.

These calculations gave the fullest and only reliable information that could be derived from paper returns. Mr. Beckett had seen every village; he had the people before him; he could judge correctly how far their objections were reasonable; and after giving full consideration to the results obtained from his tables of calculation and the circumstances he had ascertained from seeing the villages, or hearing all that the villagers had to say, the *jumma* was fixed.

Resulting variation in different villages.

There is, of course, a very great variety in the rates in different villages. Some are higher than the standard rates, some much lower. The high rate is in consequence of the land being wonderfully rich, well irrigated, thickly populated, and within easy reach of markets. The low rates may be attributed to poorness of land; isolated position, and consequent injury to crops or cattle from tigers, bears, deer and pigs; unhealthiness from dense jungle in low hot valleys; want of cultivators and high altitude, which prohibits the growth of remunerative crops, and presents difficulty in disposing of what can be produced.

From what causes.

Pergunnah-rates.

A *pergunnah*-rate such as is usually submitted for the sanction of the Board was quite inapplicable to this district, and I personally explained to the Senior Member of the Board why such reports could not be made. For instance, take a line from the top of Cheenur at Nyneo Tal to Raneebagh, both places and the country between being in *pergunnah* Chukhata; Cheenur is too high for growing anything except barley or potatoes; the Bullya valley above Raneebagh is very hot and unhealthy; and the country half-way between these places has neither of these disadvantages. No one rate could be made applicable to the three localities, nor could villages about the same altitude be classified. Two villages about the same height, but on different sides of the hill, may have nothing in common; and it was only possible to make a fair assessment by dealing with each village separately, by calculating what the *jumma* should be in the manner before explained, and, if necessary, modifying that according to the peculiar circumstances of each case.

Why.

The system adopted equally applicable to all *pergunnahs* except Bhote.

This system is equally applicable to all the *pergunnahs* of the district except those of Bhote, which will be noticed separately.

I am quite satisfied that the assessments shown in the accompanying statements are light, though in consequence of their having been raised so high compared with old *jummas*, I consider them sufficiently high.

New demand submitted for sanction.

8. Statements XIV. and XV. give in detail the *jummas*, *pergunnahwar*, *puttee-war*, and *mouzahwar*; and the following statement shows, in abstract, the proposed demand, for which the sanction of Government is solicited for the term of 30 years from date of settlement, viz.:—

Proposed Jumma--Fuslee.

Settlement.	Jumma of last year of expired settlement.	R	1276.	1277.	1278.	1279.	1280.	1281.	1282.	1283.	1284.	1285.	1286.	1287.	1288.	1289.	1290.	1291.	1292.	1293.	1294.	1295, Kumil, or to end of settlement.
Kumaon District,	Rs. 1,27,115		7,280 8 0	32,953 0 0	60,511 0 0	1,23,747 0 0	2,22,131 6 0	2,30,179 0 0	2,30,184 0 0	2,30,184 0 0	2,30,263 8 0	2,30,269 0 0	2,30,269 0 0	2,30,269 0 0	2,30,298 0 0	2,30,323 0 0	2,30,348 0 0	2,30,431 0 0	2,30,436 0 0	2,30,483 0 0		5,30,628 0 0

It is inconvenient for the settlement of a whole district to expire on the same date; I have therefore proposed that the 30 years' sanction now requested should date from time of settlement.

Term of settlement.

The sanctioned *jumma* of last settlement was Rs. 1,27,112. During the currency of that settlement, reductions by summary settlement were made to the amount of Rs. 192, while increases by *naiabad* amounted to Rs. 625-14-3. At time of settlement, villages which formerly represented Rs. 333-10-0 were struck out as waste, or included in Government forests, and villages assessed at Rs. 103 have been converted into fee-simple tenures. With these increases and decreases, the demand due on the old settlement was Rs. 1,27,109-4-3, and the new settlement *jumma*, for which sanction is now solicited, is Rs. 2,30,628, which gives an increase of Rs. 1,03,518-4-9, or 81·43 per cent.

Former demand.

Increase, 81·43 per cent.

9. A reference to statement No. XV. will show some striking increases in *jumma* which require explanation. In many cases these were *naiabad* at, or shortly before, last settlement. They are now highly cultivated villages, with a large number of *assamees*, not the property of one man, but most commonly such as may be called *bhyachara*. In others, the villages belonged to *amlah* connected with the courts or to *conoongoes*, or to their relatives, or to others who managed to conceal the extent of their cultivation and get it under-estimated. Again, many villages, surrounded by heavy jungle 30 years ago, suffered so much from the denizens of the forest that, after a continued struggle, the people probably could not harvest half their crops. Now these jungles, where remaining, are only occupied by, and useful for, cattle. Permanent cultivation has taken the place of forest, while streams of water which ran to waste have been made useful for irrigation. In the lower pergunnahs a great deal of land used for *huldee* (turmeric) was formerly not taken into consideration at all; now it has come under measurement. Cultivation and population have increased everywhere. The whole of the former, unknown before, has now been ascertained; and, except for special reasons, all classes have been equally assessed. I remember a village in Gurhwal which, with a *jumma* of Rs. 2 under the old settlement, was assessed at Rs. 80 at the new; and even then its rate was lower than the *puttee* average. I consider that the fact of any one having managed to cultivate at rates far below the average because he got the state of his village misrepresented, is no reason why he should now continue to do so. To recognize such a system would be unjust to the cultivators whose land had been fairly estimated at former settlements.

Striking increases explained.

10. On taking up the papers of a village, Mr. Beckett, before calculating what the *jumma* should be, cut out all the waste land which the villagers had insisted on being measured, which ought not to have been measured at all. He also struck out a great deal of *kanla*, or temporary clearings; in fact, excluded all that, on the principles explained in paragraph 4, ought not to have come under measurement. The villagers have full power, however, to use such land as they like, as well as to extend their cultivation in the unmeasured or forest tracts; and they have the benefit of such extension without any increase of demand during the currency of the settlement. It is to this system, in a great measure, that we owe the immense increase of cultivation that has taken place; and no doubt in the less cultivated parts there will be much more new cultivation at the end of the present settlement. In the meantime, industry may increase the profits from land, and lighten the burthen of the people every year. The assessments, as now submitted for sanction, are, I consider, very light. The last two columns of statement No. XIV. show the incidence of revenue per *beesee* (reduced area) in any one village, as compared with others.

Assessment.

Procedure.

Exclusion of all land which should not have been measured. But villagers may extend cultivation on such waste, free of demand.

Results of this rule.

Assessments, light.

Among such a number of villages it is quite possible that summary settlements may be found necessary on many grounds. Land may be washed away by floods or destroyed by landslips. Cattle disease, or death of *assamees* or other necessity may arise for rendering relief, temporary or permanent, necessary. And in my opinion such relief ought to be afforded *readily*; because all cultivated land has been now

Summary settlements—may become necessary.

From what causes.

Should be allowed freely. assessed, and the loss of *assamees* or cattle might imperil the existence of a village, which could be averted by a little trouble, and at the expenso of a few rupees. Small villages are more likely to require relief than large ones; but it must be remembered that one proprietor may lose *all* his land, and he can get no relief from the other shareholders; therefore *his* case ought to be considered, if necessary.

Cost of revision. 11. The statement of settlement expenses up to the end of 1873 shows a total of Rs. 3,38,871-15-10. The sum of Rs. 5,366-4-2 was deducted on account of bad work and recredited to Government. Allowing for this, and deducting the nominal charge of Rs. 24,967-11-10, the actual expenditure remains Rs. 3,08,537-15-10, sub-divided thus :—

	1.	2.	3.	4.	5.
	European officers, columns 1, 2, 6.	Native superintendence of field and office work, columns 3 and 7.	Actual measurement, column 4.	Office clerks and job-work, columns 5 and 8.	Stationery and contingencies, columns 9 and 10.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Gross, ...	79,957 11 10	8,839 15 9	87,814 10 0	1,24,487 14 6	37,771 11 9
Deduct, ...	24,967 11 10	5,366 4 2	...
Actual, ...	54,990 0 0	8,839 15 9	87,814 10 0	1,19,121 10 4	37,771 11 9

I have deducted the amount shown under the head of Assistant Settlement Officer, because it was never drawn at all. The amount was entered in estimates to meet the pay of Mr. D. M. Gardener, but as that officer drew his pay from the district in the plains to which he belonged, no actual disbursement on his account took place. Therefore the actual cost is Rs. 3,08,537-15-10, but before all the papers are completed there will be a further expenditure of about Rs. 16,000.

Comparison of cost with revenue, unfair. Why. It would be unfair to estimate the cost of the work by considering the revenue of the district, because the labour of measuring 200 acres divided into 5,000 fields, is far greater than making a field survey of 2,000 acres in the plains; and the record papers are quite as troublesome, requiring accurate calculations in consequence of the minute sub-division. The pay of officers could not have been reduced by multiplying hands and completing the work rapidly, because with greater haste it could not have been done well; and a field survey was of little use without a correct record. The whole Repaid by three years enhancement. oxpense is only equal to about three years' increase of revenue; and that could only have been obtained by the laborious survey which is the basis of a correct record-of-rights.

Delay in completing revision. 12. The work of revision of settlement commenced in 1863, and was completed in 1873; but as it was necessary to show all alterations made on appeal, the statements could not be closed till the end of January, 1874.

Duration of work accounted for. Necessarily there has been much time occupied in this settlement, which was somewhat increased by Mr. Beckett having to go home sick for about 18 months. It must, however, be remembered that every field in 6,333 villages, containing 286,670 *beesees*, besides thousands of *beesees* (measured but) struck out by the Settlement Officer, had to be measured by yards. After that was done the measurements and occupancy entries had to be carefully tested; and before fixing the *jummas* the Settlement Officer had to inspect every village, as well as to settle a great many questions very important to the cultivators, although they frequently referred to fractions of a *beesee*. Every objection urged by the villagers had to be heard and answered; every village had to be settled separately; and the 6,333 villages were scattered over about 6,000 square miles. No one could have worked harder than Mr. Beckett did. From his long residence in Kumaon, and having completed the settlement of Gurhwal, he had great experience. Almost the whole of the settlement work has been done by himself,

without any assistance from Deputy Collectors, and entirely without the intervention of native subordinates. I do not think this difficult and important undertaking, if thoroughly well done, could have been accomplished in a shorter time.

13. Appendix No. 2 gives a list of resumed *maafee* estates which, in the inquiry of 1855-56, were ordered to be brought under assessment at settlement.

Resumed *maafees*.

14. Appendix No. 3 shows remissions by summary settlement during the last settlement. Judging from the statement it would appear that there was no necessity for such remission except in the mouzah of Noola; but possibly the relief afforded enabled the villagers to break up new land. The total of the present *jummas* is almost equal to that of the former settlement.

Remissions during last settlement.

15. The Kumaon District is separated on the north from Hoondes or Thibet by the watershed of the snowy range; on the east from Nepaul by the Kalee (Sardah) river; on the south, including the Bhabur, which is excluded from settlement, from the Terai district by an irregular boundary, deviating only slightly from the line of springs at the lower edge of the Bhabur forests; and on the west from British Gurhwal by an irregular line starting from the Trisool snowy peak, crossing the Pindur river, and, lower down, the Ramgunga below the junction of the Kotkhunsar stream; and from this point, as far as the Muchlud river, the watershed of the Ramgunga may be called the boundary with Gurhwal, though each district possesses villages in some places beyond the watershed.

Boundaries.

The area of the district is about 6,000 square miles. Of this, three-fifths were estimated by Mr. Traill as barren, or incapable of cultivation, or snow, but in reality the area capable of being cultivated is, I think, very much less than two-fifths of the

Area.

The more important rivers, which may be divided into two classes, the glacier and the non-glacier rivers, are —

Rivers.

(1.) The Kalee, with tributaries from the Byans and Darma; Goree, from Johar; Eastern Ramgunga; and the Pindur (which enters Gurhwul).

Glacier rivers.

(2.) Surjoo, which falls into the Kalee Kosee or Kosilla; Western Ramgunga; Luddya; Gola; Nundour; Bour; and Dubka.

Non-glacier rivers.

16. The district is divided into eighteen *pergunnahs*. The names of these, and the *puttees* included in them, are given in an appendix. One *pergunnah* is composed of the *sudaburt puttees* of Kutolee and Muhrooree, which have no clearly defined boundaries, but the villages intermingle with those of Baramandal, Ramgar, Dhyaneerow and Chowgurkha. It will be sufficient to notice briefly those *pergunnahs* which have undergone most changes since they were so accurately described in Mr. Batten's settlement report.

Pergunnahs.

Those only to be noticed which have undergone great changes.

17. Gungolee *pergunnah*, "the lower half of the mountainous Doab between the Ramgunga and the Surjoo," has undergone a wonderful change during the last thirty years. At the time of Mr. Batten's settlement, this *pergunnah* may be said to have been overrun with tigers, bears and deer; and the population, with some exception, unequal to the task of fighting against them. They were a wretchedly poor, cowed by brahminical influence, without any independence, and apparently sinking to no better state. But brahminical influence has greatly decreased, and the Gungolee men have improved immensely. The *feræ naturæ* have been completely exterminated. Shikarees are so abundant that deer can only be found in the forests on the hills, at a great distance from cultivation. If a tiger strays up the valley of the Ramgunga or the Surjoo, it is generally disposed of on its killing the second or third deer. The Beneenag tea plantation, with several smaller gardens, offer employment to a large number of men, and throw much more money into the *pergunnah* than was hitherto required to pay in revenue. The jungle has to a great extent disappeared, and cultivation

Gungolee.

Gungolee 30 years ago overrun by wild beasts.

Its people poor and priest-ridden.

Improvement.

By overcoming those evils.

Prospects.	has increased much. Gungoloe is now connected with Almorah by good roads, and there is a large demand among the tea plantations on the spot for its surplus grain, as well as by the Bhootees, and at Bagesur. I expect that this pergunnah will make great progress during the current settlement, by a yearly increase of cultivation and wealth.
Choukote—Kutyoor; Sult.	18. The <i>chorekote puttees</i> in Palee pergunnah—Kutyoor in Danpore, and Sult—have also improved very much. A large hill in <i>choukote</i> , known as Lukhora, was almost a jungle 30 years ago; now it is studded with prosperous, growing villages. Kutyoor has improved solely from the benefit conferred on the country by tea plantations. At the time of the former settlement no one would take whole villages on Rs. 4 of <i>jumma</i> ; now the revenue-rate is of Re. 0-7-9 per <i>baesee</i> of <i>dowen oopraon</i> , and land is fifty times more valuable than it has been for many generations. The people are not only out of debt, which used to keep them low, but well off—more independent and hard working. In fact the cultivation of this formerly despised <i>puttee</i> pays so well, that the tea-planters cannot get sufficient labour from the surrounding country, and are obliged to procure men from other parts, or from Nepal.
Land valueless 30 years ago.	
Improved fifty fold.	
Talooka Askote.	19. The talooka of Askote at last settlement consisted of two estates; now the whole belongs to the Rajwar Pooskur Pal. It is situated north of Shoro, on the banks of the Kaloo river, and reaches up as far as Durma. The Rajwar was treated as a zemindar at the time of settlement; but on representing the political importance of maintaining the Rajwar's position, His Honor the Lieutenant-Governor was pleased, by G. O. No. 1950 A. dated 11th September, 1873, to sanction his retaining the whole talooka on the terms on which he had previously held his 84 villages, i. e., the Rajwar may increase the cultivation to his own profit, and make such arrangements as he thinks advantageous to the talooka; but he cannot interfere with the permanent tenants' possessions recorded in the <i>phants</i> .
The property of Rajwar Pooskur Pal.	
His position and privileges.	
	A full account of this estate is given in Mr. Batten's settlement report; and in concluding he entirely expresses my views in stating—"It has hitherto been assumed that so long as the Rajwar provides decently and respectably for his clan, he is himself entitled to the full enjoyment of all the profits and privileges accruing from the Rajwary estate."
Extent and assessment.	The talooka, containing 142 villages large and small, is assessed now at Rs. 1,250.
Shorea	20. This pergunnah has improved very much, though not quite in the same way as Gungolee. It was pretty well cultivated at last settlement. Prices have risen immensely; and in trying to ascertain the cause of grain having become so expensive, I am usually told that rupees have become cheap, which means that the people have become rich, and are not compelled to sell at low rates. Since I came to the province I remember wheat selling at a maund, and barley at 50 seers for the rupee at Petoragurh cantonment in this pergunnah. Of late years wheat has not been procurable in that cantonment at 20 seers; not because there is no wheat, but because the Bhootea traders purchase it at a higher rate, and 15 or 16 seers of <i>atta</i> is now the common price.
Improvement due to the Bhootea grain trade.	
Price of wheat risen from 40 to 16 seers.	
Tulla Charaal and Dharon.	21. After the whole of the assessment had been completed, it appeared that the revenue of these two puttees might possibly press heavily on the people; and under the sanction of His Honor the Lieutenant-Governor I was authorised to reduce revenue of the two puttees by one-fourth. I therefore remitted Rs. 692 in Charaal and Rs. 424 in Dharon.
Reduction of assessment.	
Proprietors of Charaal reduced native gentlemen.	Tulla Charaal is the country near Champawut which at one time was the cap of Kumaon. The land is very good, but the proprietors of most of the villages belong to families of broken-down native gentlemen, who are unfit for hard work themselves too proud to sell to others, and in consequence of the cattle remaining so long Bhabur to avoid the cold of Charaal, the land is not so productive as it might be. long consideration I was satisfied that a bad year might break down some of the lages, and it appeared judicious to afford relief before it was actually found nec-

In Dharon the land is very dry, and in case of drought the crops are not good. The people are backward, with little self-reliance, and more migratory than elsewhere. I was afraid that a bad season might compel some to dispose of their land, and timely relief appeared desirable, although the assessment only averaged Re. 0-7-8 per *beesee*.

Dharon.
Dry land—backward people.

22. The *sudaburt puttees* of Kutolee and Mahroree, containing 124 villages, with a cultivated area of 6,718 *beesees*, yielding a revenue of Rs. 5,800, formerly belonged to the temples of Budreenath and Kedarnath. The assignments were made for the purpose of distributing food gratis to indigent pilgrims visiting these shrines. Mr. Strachey, now Sir John Strachey, K.C.S.I., when in charge of the Gurhwal district, brought to the notice of Government how these funds were abused; and after full enquiry, the revenues of these puttees (together with those of Gurhwal, assigned for the same purpose) were, with the sanction of Government, placed under charge of local agents in 1852, and the revenue applied to the maintenance of dispensaries for the relief of pilgrims and others, which benefited these poor people much more than the name of "*sudaburt*," which had no real existence. The Kumaon *puttees* were at the same time taken charge of by the district authorities, and they now yield a revenue of Rs. 5,800, which, in the spirit of the original assignment, is expended on really charitable institutions, under the management of a local agency, of which the Rawuls of Budreenath and Kedarnath are members.

Sudaburt puttees,
Kutolee and Mahroree.

Purpose of the assignment.

Abused by temple officials.

Fund placed under local agents.

Puttees administered by district officers.

23. The *maafee* grants in Kumaon are 92 in number, aggregating 3,297 *beesees*. The largest *maafee* belongs to the Shastrees Ramaputtee, Neeladhur, &c. The revenue on which the cess has been levied amounts to Rs. 3,412. There are a few villages held *maafee* by residents in the districts, but most of them belong to brahmins who live at or in the vicinity of Almora.

Maafees.
No. and extent.

By whom held.

The *maafees* of Kumaon were thoroughly investigated in 1855-56. Those recommended for resumption were not disturbed till the present settlement, when 41 *maafee* estates were resumed, and their revenue added to the *jummabunders*. It has been discovered that a few *maafesdars* who were absent from the district when the former enquiries were made escaped notice altogether at that time. They claim very small estates, and their cases have been reported separately to the Board. Had they been investigated in 1855-56 they would have been included in the list which accompanied the orders of the Government of India, No. 2044, dated 18th October, 1859.

Investigation.

Cases overlooked in 1855-56.

24. Assignments made in favour of temples are, even excluding the *sudaburt puttees*, numerous. All the *sunuds* were carefully examined in 1855-56, and Government sanction (No. 2044, dated 18th October, 1859,) was obtained to all that were upheld. The temple assignments, whole or parts of villages, are altogether 444, with a cultivated area of 9,476 *beesees*, yielding Rs. 8,447. Thirty-five have been resumed.

Goonth or temple lands.
Title.

Number and value.

25. During an experience of 33 years, I have observed much change under the head of tenure, from the advancing positions of the parties concerned. It is useless trying to classify the hill tenures under the definitions given in the "Circular Directions." The terms "perfect" and "imperfect *putteedaree*," &c., are utterly unknown. As stated in Mr. Traill's report, the paramount property in the soil previous to 1815 rested with the sovereign,—not theoretically only; for the unrestricted power of alienation was exercised at the will of the ruling power in the time of the *ajahs*, and to the end of the Goorkhalee Government. A village was given to an *etrologer*, a *baid*, a *cook*, or a *barber*; and the *assamees* in possession, whatever their status, became to all intents and purposes the cultivators of the new owner. They did not like the *maafesdar's* terms, they moved elsewhere, and they retained no rights in the land which they could assert to the prejudice of the grantee.

Tenures.

Tenure.

Under native rule absolute property belonged to the sovereign.

Illustrations.

Again, this grantee might be ousted in the same way, at the caprice of the ruling power, if the village was required for any other favourite. In those times land was abundant, *assamees* were scarce, and the cruel oppression to which the people had

Attachment of the people to the soil. Minute sub-division.	been long accustomed, some times drove them away to parts of the districts where they could be comparatively free from the exactions of their oppressors. But the hill people are strongly attached to their land; and, as Mr. Traill observed in his report, throughout the greater part of the province landed property has been subjected to few violent changes, and by the process of the Hindoo law of inheritance it has now been reduced to the minutest degree of sub-division.
Oppressed state of the people.	<i>Maafee</i> villages which derived some protection from the grantees were more prosperous than <i>khalsa</i> villages; but the <i>maafee assamees</i> were only so far better than their neighbours that they had to please one who was to a great extent interested in their not running away, instead of being bullied by any official or soldier requiring their services. This state of government for a number of years took the spirit out of the people, and they were so accustomed to obey these immediately over them, that even those who had not been ousted became quite accustomed to obey the <i>thokedar</i> or headman of the village as if they were his slaves.
Mr. Traill's early settlements.	As a rule such was the state of the country on our conquest of the province in 1815. Mr. Traill at first realized the revenue through the <i>thokedars</i> and <i>syanas</i> . After he had seen the country he made <i>mouzahwar</i> settlements; but the people had recovered so little, that in these early settlements the lease was often supposed to include the proprietary right in the land. From 1825 to 1835 it is evident, from cases of that
Assamees' ignorance of their rights then.	time, that the people had improved and begun more generally to feel that they had rights in the land, and this feeling grew with the prosperity of the country. At the 20 years' settlement the first record was attempted by Mr. Batten, who, hampered with the charge of the district, had to struggle against the ignorance of the people and to contend against the few who could appreciate the difference between <i>hissedar</i> (proprietor), <i>khaekur</i> (permanent tenant), and <i>sirthan</i> (tenant-at-will), and were quite ready to make use of their knowledge against those who were ignorant or apathetic.
Dawning intelligence 1825—1835.	
The first record—Mr. Batten's.	
The 20 years' settlement wakes up the people,	After the 20 years' settlement the revenue courts were flooded with cases about <i>hissedares</i> and <i>khaekurees</i> . These cases sharpened the intellect of the people, who, before the end of the settlement, thoroughly understood what was involved in these terms, which were little more than names in Mr. Traill's time. <i>Assamees</i> could then make their own terms. <i>Pudhans</i> , <i>thokedars</i> , or proprietors could not afford to displease their tenants, as they were too poor to pay on waste land, and could not easily replace <i>assamees</i> who left. Thus the undefined position of proprietor and tenant remained for about 20 years, or up to 1835. During that time Mr. Traill might have transferred even a whole village, and his right to do so would not have been questioned, except perhaps by very few. From the date of Mr. Traill's last settlement the people began to improve generally, and the 20 years' settlement enlightened them in many ways.
who resort to court to establish their rights,	
and tenants become important.	
The people's views of tenure at date of present term.	The subsequent litigation made great changes; and when Mr. Beckett came to the work of settlement, he found every one wished to be recorded as proprietor. The old generation had passed away; the existing one could not realise the position of their ancestors of 50 years before; and it was a very difficult work to determine the real position of many who claimed under Mr. Traill's settlement, the measurement book of 1823, Mr. Batten's <i>phants</i> , decrees of court, or as relations of those who considered they had rights under any of these authorities. Mr. Beckett made every endeavour to each man in his right place, and those who were dissatisfied were referred to revenue courts.
Difficulty of ascertaining rights claimed at settlement, under conflicting authorities.	
Improved cultivation.	The state of cultivation in the best pergunnahs has entirely changed since Traill's time. <i>Assamees</i> are abundant in the well cultivated parts, and land is so The <i>puharee</i> is extremely attached to his home, and it is difficult to induce a <i>kha</i> even to move to another part, although the change might carry with it proper rights. I do not now see the migratory spirit that appears to have prevailed Mr. Traill's time; and my experience is, that villagers will put up with great hardships

regards revenue rather than give up their village. If a tiger or sickness carry off shareholders, the remaining fow will never give up if they can pay the revenue by any means. Some Kalee Kumaon people are exceptions to this rule. They are headstrong, obstinate, and spiteful. If they had a *thokedar* or *pudhan* whom they disliked, a whole village would resign and go elsewhere rather than be compelled to pay him recognized dues.

A home-loving people.

Unamiable exceptions in Kalee Kumaon.

Appendix No. 5 shows the state of cultivation, from which the Board will see that a large portion of the land is cultivated by the actual proprietors, and a great deal of that held by *khaekurs* most probably is the same. No doubt the greater part of them are the descendants of the cultivators in possession at the time of the conquest, but the superior intellect and position of others long ago established their (the *khaekurs*') position as that of tenants.

Cultivation chiefly by actual proprietors.

Excluding *maafee* holdings, and some of the more powerful proprietors whose ancestors, very influential men when Kumaon first came under British rule, had at once assumed the position of proprietors, which they steadily maintained and improved on every opportunity, it may be said that the proprietary right is vested in those whose ancestors occupied the land at the time the province was taken from the Goorkhas, and who have advanced the cultivation from its former backward state to its present prosperity. Or in another class who, by their influence and money, or by their own labour, have changed thick forests into prosperous villages. A great many years ago, former *maafedars*, whose rent-free rights had been ignored by Mr. Traill, took advantage of the ignorance of the people to whoedle them out of their rights, at that time little understood, and perhaps as little valued. But this was done so effectually that when the old resident cultivators came to their senses, and tried to recover the rights they had given up, they found that the *ox-maafedars* were too wise; and by decrees of court or registered deeds, many joshes and other brahmins had entangled the old cultivators in such a way that at the 20 years' settlement the *assamees* were, with the exception of being permanent, no better than tenants-at-will, so completely bound down by the payment of grain and other dues, that practically they were altogether powerless to oppose the new proprietors in any way. A few villages, by private transfer or sales in execution of decrees, have passed into bunnials' hands. But, with such exceptions as I have explained, the proprietary right may be said to be vested in the descendants of those who cultivated the land under the Rajahs and Goorkha Government.

As a rule, proprietary right vests in descendants of actual occupiers at time of conquest.

How other proprietors acquired their rights. By abducting the forests.

By cheating.

The *khaekur* enjoys hereditary though not a transferable right in the land he cultivates; and on the death of a father the sons generally make a sub-division of the land, which not unfrequently reduces the holding of each so much that these *khaekurs* are obliged to cultivate other land as *sirthans* or in *paekashtee* in some distant village, here they make their own terms with the proprietor. *Paekashtes* of long standing have now assumed the position of *khaekurs*. New *paekashtes* are in the position of tractors or *sirthans*.

Khaekuree hereditary, not transferable. Leads to minute sub-division, and this to *khaekurs* becoming tenants-at-will elsewhere.

There is no tenure corresponding to what is known in the plains as *zemindaree*. *maafee* rights which had been undisturbed since the conquest of the province they invariably include the proprietary right, and the cultivators are only

Zemindaree unknown.

Where proprietary rights which had been recognized at the 20 years' or rights of the same kind acquired by purchase, existed, they could not be with; but, with these exceptions, the cultivators have been recorded as the the land they occupy, while the permanent tenants can never be disturbed red with by the enhancement of rent. In fact these tenants are in all respects proprietors, with the exception that they cannot sell their holding; and small sum in addition to the quota of revenue due from the land recorded

Tenants differ but slightly from proprietors.

Sirthans must make their own arrangements.

other tenure requiring notice is that which exists in some parts of the whole villages are in possession of the permanent tenants, *khaekurs*.

Khaekuree villages.

Non-resident proprietor who cannot interfere with these tenants. One of whom acts as *ghur pudhan*.

The position of such proprietors somewhat improved by this settlement.

Temple lands. *Goonth* tenures. The temple could not sell its land; but cultivators could sell their rights in it; and they have been recorded at settlement as proprietors.

The proprietor residing in another part has no power to interfere with these *khaekurs* or their land, waste or cultivated. A sub-*malgoosar* or *ghur pudhan* realizes the revenue as well as *malikana* from his brother *assamees*, and makes the whole over to the proprietor, who is also the *suddur malgoosar*. In such a village the *khaekurs* were formerly the real proprietors, but somehow or other the proprietary right got vested in the *thokedar's* family, and they tried from time to time to establish full proprietary rights, which the old but defeated proprietors obstinately resented during the last settlement in the Dungwal Toke. The bad feeling between the two parties was so strong, that a summary arrangement had to be made; and at the present settlement an arrangement has been made by which the income of the proprietors is considerably in excess of what they received under the previous settlement.

26. The temple land tenure was a very doubtful one. It was often recognized by decrees of court that a "*goonth*" *assamee* had a right to sell his land. In other cases of the same nature, the proprietary right was considered vested in the temple. It appears altogether unnecessary to place temple lands on a different footing from the *khalsa* as regards proprietary right. The representatives of a temple could not sell its land. The temple, or its representatives only require the revenue to meet their wants. *Goonth* cultivators had often sold their land, and it could not matter to the temple authorities who cultivated so long as the revenue was paid. Under these circumstances, all the old cultivators in temple lands were recorded proprietors as in *khalsa* land. This will put an end to many disputes, and prevent troublesome *poojarees* giving needless annoyance.

At the time these villages were assigned, the property in the soil belonged to the ruling power everywhere in the province; and where the object of the endowment remains intact, it is only fair the *goonth* villages should be treated, as regards rights, the same as in *khalsa*; because the recognition of the old *assamee's* proprietary rights in no way affects the receipts of the temple, it only checks the unwarrantable interference of dishonest *mahunts* and *poojarees*. The same system was observed in Gurhwal.

Enhancement.

27. This is unknown in Kumaon among permanent tenants. The Rent and Revenue Acts are not applicable.

Land measure.

28. In Mr. Traill's time the usual way of computing land was by estimating the quantity of seed required to sow it. The different terms used to denominate its divisions have gradually become obsolete; the most common terms of *nalee* and *beesee* alone remain. These also varied; but Mr. Traill made a standard *nalee* of yards $20 \times 12 = 240$; and as the *beesee* contained 20 *nalees*, a *beesee* was equal to 4,800, or only 40 yards short of an acre, therefore *beesee* and acre may be considered the same.

Beesee and acre almost alike.

This system was fully recognized in any measurements made by Mr. Traill. became more popular during the currency of last settlement; and now no other measure is known to the present generation, who never knew anything about the terms of *jhula*, *ali*, &c.

Average holdings.

29. Appendix No. 6 gives the number and castes of proprietors and permanent tenants. The number of tenants-at-will is not given. It appears that the holding of each proprietor, if he dispensed with his tenant-at-will, would be $2\frac{1}{2}$ *beesees*, while the average holding of a permanent tenant is only one and $\frac{1}{2}$ *beesees*. Many of these permanent tenants have been reduced, by repeated such small holdings, that they frequently cultivate land in their own village at-will, or in distant villages as *paekashits*; but nearly all over the district, increases every year; terraced walls are, by degrees, made on the steep hill; the less steep parts are for some years gradually levelled by placed at the lower end; and in a few years such places become as permanent cultivation. Ravines are sometimes built up by throwing

Of proprietors $2\frac{1}{2}$ *beesees*.
Tenants, $1\frac{1}{2}$ *ditto*.
Increasing cultivation.

Construction of terraced fields in ravines.

distance of 20 to 50 feet, strong walls made of large pieces of rock. The ravine water assists in washing down loose earth, and in time the space is filled up, after which others are made as high up as the nature of the ground admits of. The ravine water, when no longer required in making fields, is turned into another ravine; or arrangements are made for its passing down without injury to the fields made; while it can be applied for irrigation purposes at pleasure. There is a great deal of most productive land which has been made in this way, and the quantity will increase every year. New clearings are also made in jungles, and thus proprietors, *khaekurs* and *virthans*, cultivate as much land as they can manage. Sometimes a part of the family takes service while the others remain at home.

30. Under the old settlement the position of proprietor and tenant was very different from what it is now,—very few of the tenants were recorded at all, although their *khaekuree* rights were not interfered with. This gave the proprietor much power. The usual perquisite was a rupee on the marriage of each daughter, and other offerings, which were very vexatious, and could be made use of to bully any *assamee* who did not give what the proprietor asked. The perquisites of this class have now been commuted to 25 per cent. on the revenue, which is much more than the proprietor was legally entitled to under the former system. In other cases, where small payments of grain were made in addition to these perquisites, 50 per cent. has been given; and where large quantities of grain were given, and money in addition to other offerings, in some instances three and four times more than the *jumma*, 100 per cent. has been given, i. e., half of the gross rental has been divided equally between the Government and the proprietor.

Malikana perquisites formerly paid by tenants to proprietors.

Commuted to money rates varying from 25 to 100 per cent. on the revenue.

Under this system cultivators in many villages have been relieved, as they were required to give much more than they now pay. They are freed from indefinite demands, and at the same time the revenue has been increased.

Which prevent exactions.

31. The Bhotia pergunnah of Johar, situated north of the outer snowy range, on the banks of the Gorge river, has no land of any value, but a very thriving trade. During the rains the Bhotia families live in their villages in Johar, while the men are employed in going to and from Thibet with their *jooboos*, goats and sheep. From October to May these are employed in bringing down borax and salt from the upper villages, which they deposit at different depôts; and in carrying up grain, *goor*, &c. For instance, they bring all their Thibetan products to Moonsheecaree before they attempt to carry any part lower down. On leaving Moonsheecaree they generally form depôts at Tejum, Buggar, Sera Gungolee, or other place, where their families are to live during the winter. At Tejum in Johar, Looathul, and at other places in Gungolee and elsewhere, they have built houses. Many of them erect temporary shelter, and while the women are occupied in weaving blankets, or looking after the cows and cattle, some of the men are ever busy with their goats and sheep, carrying borax to Bagesur or Ramnuggur, and salt to the villages. The former is sold to bunniahs, or to Phuldakote men at Ramnuggur, and the Bhotias take back grain or *goor* to their depôts; and thus they go on till they have sold all their borax and collected as much grain as they are able to carry on to their homes in the snow. The salt is bartered for the grain in the villages.

Bhotia—land of no value, but a good trade.

Depôts midway down, whence borax and salt are taken down for grain.

These Bhotias keep a few ewes themselves. They buy a great many Chumba sheep for lading, which are brought by Kangra men for sale at Ramnuggur, and all they can get from the Mulla Danpore pergunnah. A few ponies are brought down, but since the Sikhs invaded Thibet about thirty years ago, the pony trade has been ruined, from the Sikhs having carried off nearly all the good mares. A good pony now, such as would have been bought for Rs. 100 thirty years ago, costs Rs. 300.

Trade in live stock, sheep, ponies. The pony trade ruined by the Sikh invasion of 30 years ago.

Some of the Johar Bhotias are well off. The old race, among whom Deboo (who assisted Moorcroft), Hugguroo, and Futteh Singh were well known, have passed away, and none of the present generation can exercise the power and influence they did: but the Joharees are decidedly the most intelligent and most wealthy of all the Bhotias

Joharees the best of their race.

Leading men.	of this province. Dhunnoo is a very enterprising man, and goes to Calcutta every year, to purchase his own supplies of cloth, corals, &c., for the Thibet market; Manee, son of Dehoo, who distinguished himself with Schlagentmeit, and under the Great Trigonometrical Survey, is putwaree of Darma. Ho, Manoe son of Futtah Sing, Dhunnoo Jangpanee, and Gyane son of Huggaroo, are now the leading men among the Johar Bhotas.
Murrain.	The murrain among cattle is very fatal this year in some places above Bagesur, and it is ever liable to carry off sheep by thousands.
Government demand fixed on trade profits as well as on land. Reasons.	The revenue fixed on those Bhotas villages is not on land only, but on their profits generally. It is quite fair they should pay, because they occupy an immense tract of country to the exclusion of all others. For six months they graze their sheep and cattle all over the country. They have the benefit of the roads and bridges, made at a great expense; and with these advantages they make large profits, while they pay almost <i>nil</i> to the Thibet Government.
They make their own <i>phant</i> . Why.	With their consent it was arranged that the villagers should make their own <i>phant</i> or distribution of <i>jumma</i> every year for all they had to pay in excess of the land revenue, as they know who among them had suffered from the loss of sheep, or had been crippled in trade, and who had been able to make larger profits than usual.
Remissions should be given in bad seasons.	I think, however, that although fair <i>jummas</i> have been fixed, in the event of severe loss from murrain, remission should be freely made; because it is very disheartening in payment of this kind to be called on to pay on profits when murrain had caused actual loss. Strictness in demanding <i>jummas</i> now fixed in bad seasons, when murrain has destroyed their flocks, might throw the poorer Bhotas into the hands of bunnishs, which would be a terrible calamity. But in the absence of murrain the <i>jummas</i> now fixed can be easily paid, and will be cheerfully given.
But for murrain the <i>jumma</i> can be easily paid.	
Eastern Bhotas. Less civilized.	32. The eastern Bhotas of Byans and Darma are very far behind those of Johar in every way. They are much more obedient, and pay a good deal to the Thibetan Government. They drink very much, and altogether are far less civilized than in Johar or Gurhwal. The Byans people, on the borders of Nepal, can easily evade any objectionable order by crossing over the border into Nepal, and they have no respect for law except in so far as they may be made to feel its power. The most enterprising men in this tract are the Kambas, who came originally from Thibet. These Kambas, who had long been traders in those parts, were located at the settlement in this part of Bhotas, and made to contribute to the revenue like other Bhotas. They were quite ready to do this to remove the objections brought by the Bhotas, that the Kambas paid nothing and ought not to be allowed to trade.
The Kambas, immigrants from Thibet.	
Choudans.	Choudans is altogether different from Byans and Darma. Its climate is so mild that people can live there and cultivate throughout the year.
	These pergunnahs require no further notice here. Full particulars about passes, and other details, may be found in Mr. Batten's report or Mr. Atkinson's <i>Gazetteer</i> .
*Ten per cent. cess.	33. A ten per cent. cess has been levied, and is applied to education, district post and putwarees' pay.
Education.	34. There is great difficulty in bringing education within reach of all, though we do not attempt to teach more than to read and write, and arithmetic of the simplest kind. Under present circumstances this is sufficient for the mass, and if any sharp boy wishes for a higher education, which his father cannot afford, he gets an allowance to admit of his attending the school at Almorah. A certain number, according to our funds, are provided for in this way on the recommendation of the inspector or district officer. There is a boarding-house under construction at Almorah where such boys will be looked after.
Elementary.	
Scholarships.	
Teachers' pay	Teachers in the <i>hulkabundee</i> schools only receive Rs. 5 per mensem. This is sufficient to procure men capable of teaching all that is aimed at, and it is considered

more beneficial to impart to many the useful knowledge of reading and writing sufficient for their every day use, than to give a smaller number a better education by employing qualified but more expensive teachers. Expensive school-houses are not required. As a rule, sheds are erected by the people, and the school-masters can be removed to different localities from time to time as required.

The aim to diffuse simple knowledge among the many, rather than give a higher education to a few.

There are 99 *hulkabundee* and six *tuhseel* schools, which had an average daily attendance in 1872 of 2,014 boys. The schools are looked after by the inspector, but they ought to be carefully watched by the district officer, and no pundit should be allowed to draw his pay for doing nothing. The *hulkabundee* schools will prosper or decline according to the interest taken in them by the district officer.

Schools, attendance.

The better classes, who are desirous of educating their children well, can afford to pay for them; and though our education was said to be in a state of backward simplicity, Kumaon can, I believe, boast of a higher percentage who can read and write than any other district in the North-Western Provinces.

Results.

35. Without the district post, the police arrangements of the district would break down; and the certainty of information coming from all parts of the district keeps the *putwarees* and the rural police up to their work. About 6,000 square miles have to be looked after. In this area there are 91 *putwarees* located, through whom the police arrangements are carried out; and a great many men are required on the district post establishment to convey reports from all parts of the district to Almorah.

District post.

36 Previous to settlement there were 42 *putwarees* on Rs. 5 a month borne on the *tuhseel* establishment. The circles of some contained an area of 300 square miles, and the consequence was, that they could only do a part of what was required of them. Now there are 91 *putwarees*, the number having, as in Gurhwal, been increased at settlement, out of the cess then imposed. Those wholly paid from the cess get Rs. 10 per mensem, while an allowance of Rs. 5 each is given from the same source to such of the old *putwarees* borne on the *tuhseel* establishment as are qualified by a knowledge of survey work. Their circles are reduced to an average size of 50 square miles, paying a revenue of about Rs. 2,500.

Putwarees.

Numbers, emoluments, circles.

These *putwarees*, in addition to the duty of collecting the revenue and their ordinary police work, have to measure land when required, to execute decrees where land is concerned, to look after the repair of district roads, arrange for supplies to travellers, procure coolies when required, and keep the district officer informed of all that is going on. There are no village *putwarees* similar to the class of village accountants in the plains.

Duties.

No village accountants.

37. There is no regular police in the Kumaon hills, except a few at the stations of Nynee Tal and Raneekeh, and at Champawat; nor are there any chowkeedars. The few *chuprassees* attached to the courts and *tuhseels* are required to perform the police duties of escorting prisoners or apprehending criminals, which is done with the assistance of the *thokedars* and *pudhans*. The rural police are the *pudhans* of villages, who in serious cases are required to apprehend criminals, report crime to the *putwarees*, and arrange for the safe transport and custody of the Government revenue from distant parts to Almorah. If they fail in making police reports, the *thokedar* is bound to bring to the *putwaree's* notice any serious crime committed that has been concealed or not reported by the *pudhan*. In all parts of the district every *thokedar* or *pudhan* has enemies who are ready to bring his neglect of duty to notice; crimes unreported soon get talked of in the village, and this extends to friends beyond the village, when some one is sure to make a report to the *putwaree* or the district officer. I believe our rural police system works better than any other in India; and it would be most unwise to interfere with it. It has the great merit of being cheap, i. e., costs the State nothing (I do not here include the Bhabur police, which is separate); and the absence of annoyance and worry inseparable from a paid police is not its smallest recommendation.

Police.

None save at stations.

Escort, arrest.

Pudhans the rural police. Their duties.

The *thokedar*.

How the system works. Character, good. Costs nothing.

Thokedars.

Local names meaning the same office.

Differences.

Notable men among *thokedars*.

Mulk Sing a king in his own *thoka*.

Thokedars once oppressive.

Their suppression determined on.

Altered circumstances required their retention.

Dues fixed at 3 per cent. by Mr. Traill. Seldom acted upon.

Dues recorded at the 20 years' settlement.

To reduce all to 3 per cent dues, impolitic.

The position of the most important men improved.

These dues deducted from the Government demand.

But the *jummabundee* not really reduced thereby.

Pudhans. Under what circumstances a village had more than one.

38. I have already stated that at the conquest of the province *thokedars* were entrusted with the collection of the revenue. *Syanas*, *kumeens*, *thokedars*, and *booras* appear to be synonymous terms—local names for the same thing; although *syancharee* and *booracharee* in time got mixed up with *hissedars*, probably with the object of excluding land from the revenue demand. No doubt there was a very great difference between some of those called by these names. Tej Singh, *syana* of Kukurgaon, Narain Singh of Ramadhon, Kullyan Singh of Juspoor, Mulk Singh of Danpoor, and some others were quite different from the common *thokedars*. As Mr. Batten observed, they occupied a feudal place in the estimation of their subjects. When I came to the province Mulk Singh was a king; his word was law in upper Danpoor. He did what he liked; he took what he wanted, and the people did not grumble.

At one time it was found that the *thokedars* were oppressive, and on the representations of Mr. Strachey and Captain Ramsay, then in charge of the hill districts, it was ruled by Government order in 1856 that *thokedars* should be dispensed with as far as possible, and that at the settlement those who could not be so dispensed with, should get a percentage on the revenue of their *syancharee* villages.

Since that time I have been compelled to change my views. The people have altered so much since 1856, that it was absolutely necessary to maintain *thokedars* as far as possible, to ensure the due performance of police duties on the part of *pudhans*; and I saw that the abolition of the office of *thokedar*, which had existed so long, would be very unpopular with all except the democrats who, more than others, required to be kept in check. I accordingly represented to the Board and Government the necessity of keeping up all the old *thokedars*, and His Honor authorized me to do what I considered necessary. In the course of appeals, I had to go through nearly all the *thokedars mials*; and my opinion is, that Mr. Traill's order, which reduced all *thokedars* dues to 3 per cent., never was acted on except when a small *thokedar* came into court. The chief *thokedars* never required to apply to court, as in those times they made *assamees* do whatever they liked. At the 20 years' settlement the *thokedars* in many instances recorded very heavy payments in the *phants*. Others, resting on their *thokedars sunuds*, felt it unnecessary to record their *thokedars* dues at all.

Some of these *thokedars* are gentlemen, in the habit of being hospitable; and to reduce them to 3 per cent. at once was felt to be very hard indeed. I therefore, in consultation with Mr. Beckett, determined that some of the most important men should receive 10 per cent., and some 6 per cent., as in Gurlwal, on all villages where their *thokedars* was entered in the 20 years' settlement *phant*, and that 3 per cent. should be given to all whose names were in *thokedars puttis* if *thokedars* was upheld among those who were descended from men in office when Kumaon was conquered.

No doubt this selection of the most influential men will make others envious; but I do not think any have been omitted who ought to be paid at the higher rate.

As all the settlements had been completed before these *thokedars* claims were recognized, I directed the Settlement Officer to deduct the amount from the Government demand. In reality, if the *thokedars* had been given dues at first, the Government *jummas* would have been so much less; and the fact of the extra *thokedars* dues having been given at the end, instead of during the settlement, makes no difference in the *jummabundee*. The sum required to meet these dues was Rs. 2,156-4-0.

39. With few exceptions there was only one *pudhan* of a village under the old settlement. At the 20 years' settlement some villages had as many as ten. The *assamees* found the mistake of having many *pudhans*, who created a great deal of mischief. When there were separate *dhurras* or clans in a village, each was allowed to have its *pudhan*; or where there were a very large number of proprietors of different castes, more than one *pudhan* was allowed; but as a rule no more *pudhans* were appointed than necessary. Where *pudhancharee* land existed in sufficient quan-

tity, that was the *pudhan's* remuneration. Where there was not enough, or none at all, 5 per cent. was given. In some cases sub-*pudhans*, i. e., *ghur pudhans*, were appointed, with the object of looking after the *assamees'* rights, and collecting the revenue. These *ghur pudhans* can at any time be removed by the district officer or Commissioner, on its being shown that they can be dispensed with without injury to the village.

Remuneration.
Ghur pudhans.

40. There is no correct return of the population in Mr. Traill's time. The first census was taken in 1852; not by counting all in one day, but by collecting the requisite information through *putwarees*. This was a work of months; but as the births were probably nearly equal to, and certainly not less than, the deaths during the time occupied, this return was more correct than any that could have been made on a particular day. The last census was attempted in the common way of counting all present on a certain day. The settlement census, including the town of Almorah, but not the stations of Nynce Tal or Raneekhet, shows the population of each place as they were counted during the progress of the field survey, which extended over several years. All show a great increase in the agricultural population of the district.

Population.

First census, 1852.
Mode of taking it.

Last census.
Settlement census.

Population Return.

1852.			Settlement Census.			Census of 1871.		
Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
190,203	169,804	360,011	208,878	186,044	394,922	213,975	192,067	406,042

In my opinion the entries in the census return fall short of the actual population. The settlement statements certainly are said to include Almorah, but as they were prepared by the ameens conducting the survey, they no doubt left out many who had no interest in land. The census of 1871 was taken at a time when many hillmen and women are on pilgrimages to the plains; and my belief is, that this return includes *no travellers*: therefore all who were on journeys in the interior of the hills, on their way to local shrines or markets at the foot of the hills, or employed in the forests or otherwise in the Bhabur, are not reckoned; while a great many hill-people must at that time have been located in the Terai. The aggregate of all these would be very considerable.

Under-estimated.

41. There are two *tuhseels*—one at Almorah with a *peshkaree* at Palee; and the other at Champawut, with a *peshkaree* at Petoragurh.

Tuhseels.

42. There are five *canoongoes* in Kumaon, and they are made generally useful by the Senior Assistant Commissioner in the *tuhseels*, or in the district, or any other way that they can be best employed. The present men are better educated than the old class, and, with our present records, are very useful.

Canoongoes.

43. The principal crops in the hills are rice, wheat, and *mundooa* (millet). In some of the valleys, as in Puttee Salim in the Koseo valley, and in many other parts the finest (*basmuttee* and *hunsraj*) rice is produced, which sells at 5 or 6 seers per rupee. A list of the grains grown in the hills will be found in Appendix No. 9. In former years the people were content with the coarser grains—*mundooa*, *koonee*, and *joongra*, being most extensively used, and they consumed little good rice or wheat. But I think this is not so much the case now. A great deal of wheat and rice is eaten. The people can afford to sell at convenience, and they dispose of their spare grain in the best market, when prices are favourable. Grain from the west, which used to

Products.

The people now consume much of the fine grains, and can afford to wait for good prices for the surplus.

come to Almorah, now goes to Raneekhet. A good deal is taken at the tea gardens, and the Almorah bazaar is chiefly supplied from below.

Grain carrying.

A great many men are employed during the hot weather and rains in carrying grain from Huldwanee, Kaladoongee, and Ramnuggur to Almorah, Nynsee Tal or Raneekhet. There are thousands of ponies engaged in this trade, and at certain seasons they take down potatoes, which are carried to the plains.

**Cotton.
Sugarcane.**

Cotton is very little cultivated, and none exported from the hills. Sugarcane is grown in many places on a small scale. There are some sugar-mills in the eastern pergunnahs, but in the western the sticks are sold by retail in the bazaar to a considerable extent. Turmeric is a very important and remunerative article of export. Immense quantities of it are grown in the lower hills, and sold at the markets of Huldwanee, Ramnuggur, Burumdeo, &c. Very little ginger is produced. Hemp is cultivated to some extent in many parts, but more particularly in Chougurkha pergunnah. It is not so extensively grown in Kumaon as in Gurhwal. Most of the "*churus*" used at the drug shops is made in Chougurkha.

Turmeric.

Ginger.

Hemp.

The price of *huldee*, which according to Mr. Traill's report used to be about two rupees a mauud, is now six rupees.

Exports and imports.

Articles of export and import will be found detailed in an appendix. Grain, as a rule, is not exported. The people were formerly so improvident, and so accustomed to regular seasons, they used to dispose of their surplus grain every year; but they have bought experience during the last ten years, and it is the custom now always to keep a stock in store.

Grain not exported.

Tea.

44. It gives me the greatest pleasure to say that the prospects of tea cultivation, which were so long gloomy and disheartening, have entirely changed, and there is, I trust, a good hope, not only of existing plantations yielding a satisfactory return, but that other capitalists may be encouraged by their success to establish new plantations. It would infuse life into eastern Kumaon if some large paying plantations were settled there, where land might be purchased, and labour is abundant.

**Room for new gardens in
East Kumaon.**

Kutyoor.

The Kousance and Kutyoor companies have changed Kutyoor from a desert into a prosperous tract, which only requires time and men to convert much of the remaining jungle into fruitful fields. I see immense improvement in Kutyoor. The tea planters have done for Kutyoor what Mr. Batten in his settlement report anticipated; and I wish the people from over-crowded parts could be induced to settle in that *puttee*, where they would find good masters in the present tea-planters, and abundance of land on which they might locate their families. The Doonagiree plantation has thrown a vast amount of wealth into the surrounding country, from which it derives labourers. The Beneenag and other smaller plantations have done much for Gungolee. Julna has in the same way greatly benefited the country east of Almorah, and there are other smaller plantations which have been of immense value to the district.

Gungolee.

Tea market.

The difficulty in disposing of their produce was what hampered the planters. Now purchasers come to their doors, and readily make engagements for future years, at prices which, I believe, are considered remunerative.

Expenditure on production seen in the improved condition of the people.

The great expenditure of the tea-planters during the last fifteen years has thrown large sums of money into the district, which is quite apparent in the improved condition of the people and their houses in certain parts; and I trust the time has now come when the planters may reap the reward of their patience and industry.

**Tea estates.
The appendix includes two that are mere gardens, not tea plantations.**

Area and purchase money of fee simple estates.

45. A list of fee simple estates is given in appendix 10. There are 19* tea plantations in fee simple tenure, four grants, and 39 villages assessed in the usual way, belonging to tea-planters in the district. In some, little tea has as yet been planted, and in some none at all. The fee simple estates aggregate 13,942 *beeseees*, which have been bought at a cost of Rs. 32,389, and they pay Rs. 182 under the 10 per

* Not including incomplete sales.

cent. cess. This cess was fixed by charging 10 per cent. on the amount given by 4 per cent. on the purchase money, i. e., if a fee simple had been purchased for Rs. 2,000, 4 per cent. on this would be Rs. 80, and 10 per cent. on that sum would give a cess of Rs. 8. The rule does not of course apply to the purchase money of a ready-made tea plantation, but merely to the value of the land, which was determined without reference to the value of the tea or buildings on it.

Cesses.

46. A list of tea sites set apart by Mr. Beckett will be found in appendix No. 11. Many of them are small, and in my opinion it would be far better for a tea planter to purchase a village with extensive pasturage ground than to attempt high cultivation on a small area, where manure in sufficient quantity would not be procurable. Small villages, with large tracts of jungle attached, might be purchased in Kalee Kumaon, Gungolee, Dhyaneerow, and other parts.

Land available for tea.

47. No district could be better off for markets. Nynee Tal, Raneekhet and Almorah would consume far more than the hills could supply. At the two former places there is a continual market for labour, and a man would probably pay the whole of his quota of revenue by carrying a load from Almorah to Nynee Tal and back, or by working a week between Nynee Tal and Kaladoongee, or at Raneekhet, or by serving a fortnight at a tea plantation. In the vicinity of Raneekhet the villages could pay their revenue by selling their *bhoos* (chaff) and rice straw. Milk has a fabulous price at all the stations. Vegetables and fruit sell equally well, fruit being eagerly bought. Rice or *atta* is seldom cheaper than ten seers per rupee, while turmeric, red pepper, pomegranite rind, and a great variety of jungle products are brought down during the cold season to the markets at the foot of the hills.

Markets.

Labour.

Prices.

Products.

It is estimated that, exclusive of borax, valued at Rs. 3,00,000, which comes from Thibet, the hill products, cultivated and natural, brought down to Ramnuggur alone every year, exceed Rs. 1,50,000, of which about Rs. 80,000 belong to red pepper and turmeric; and if grain is ever exported in consequence of high prices in the plains, a large sum may be added to this.

Value of some exports.

Bhagesur on the Surjoo river, 28 miles north of Almorah, is not so important as regards the borax trade as it used to be, though improved circumstances have added to the number of the houses, and these are better built than formerly. Still it is the principal borax mart, where the Almorah bunniah purchase the tincal from the Bhoteas. A great deal of the raw material is now brought to Ramnuggur by Bhoteas themselves, without its passing through any bunniah's hands; and much of it which used to go to Bhagesur from the Durma side is taken down direct to Buramdeo, and sold in the raw state to Toola Ram of Champawut, or to Phillibheet bunniah. There is a large collection of people at Bhagesur at the 12th of January fair, when ponies, beasts' and birds' skins, mats, baskets, blankets, &c., from the north; pots and pans, cloth, &c., from below; and oranges, grain, &c., from the surrounding country, change hands. There is also a fair at Thul in April, when extensive transactions are entered into between bunishes and Bhoteas, for clearing up old accounts and making advances. large sheep purchase are also made at Thul.

Decline of Bhagesur as a borax mart.

But in other respects improved.

The Bhagesur fair.

The Thul fair.

48. In the hills there is a recognized right of Government in all forests in common with the rights of the villages. If Government consider it necessary to take large and certain forests, as in the vicinity of Raneekhet, this right would be admitted but the villagers retain their right of grazing cattle, getting wood, grass, &c.; and if at any time the Forest Department wish to encourage the cultivation of potatoes, the village which owns the land by boundary should have the option of cultivating that land. It must be remembered that the villagers owned their jungles way before we came to Kumaon, and they have been accustomed to feel that had a certain position, which no doubt enabled them to get petty dues from siders locating cattle; and in our recognizing their proprietary right in land,

Forests.

Rights of Government, And of villages.

Government can dispose of forest in excess of village requirements.

Removal of some forests desirable.

Where village forests are conserved, the people should retain their privileges.

Waste lands.

Mr. J. H. Batten on rights in waste land in Gurhwal.

the people have acquired a certain right to the use of the forests. At the same time the Government has a right to preserve forests where necessary, or to dispose of waste land in excess of what the villages require. In many parts of the district it is desirable to get rid of jungles as fast as possible, in order that wild animals may be destroyed and the way prepared for cultivation. Forest clearances generally lead to the settlement of villages; but where it is not the interest of Government to have cultivation extended in a forest, it is quite just to prohibit it.

It is felt as a very great grievance if villagers cannot get wood for their ploughs, house-building, or fire-wood; and in depriving villages of their forests by placing them under the Forest Department, the inconvenience should be made as light as possible. The petty interference of native officials is looked upon as an intolerable nuisance.

The subject of forest and waste land was noticed in my report on the recent Gurhwal settlement, and I beg to quote paras. 7 and 8 therefrom, and para. 16 of Mr. Batten's Gurhwal settlement report, as equally applicable to Kumaon:—

(Mr. Batten's).—"16. Large portions of waste land, including whole ranges and their vast forests, have been included from olden time in the boundaries of adjacent villages, though not included in their recorded *rugba*. No interference with this nominal allotment of waste (except in the case of the Terai lands) has been attempted at the present settlement of Gurhwal. Such a division has been found use-

* The Gurhwalees do not migrate annually to the Terai to graze their cattle, their own hills affording sufficient pasture.

ful in giving separate tracts for pasture* for the cattle of different villages; but the inhabitants have been strictly forbidden, and the prohibition is particularized in the *pudhan's pottah*, and also in the several *ikrarnamahs* signed by the shareholders of villages, from levying dues for the privilege of grazing within certain boundaries, unless the custom of paying and receiving them has been immemorial; the burden of the proof of this resting with those who demand such payments. Owing to the ignorance and retarded civilization of the communities, the absence of village accountants, and the great desire that I all along felt to leave the people as much as possible to themselves, and to inflict on them as little as possible the visitation of native officials, or the necessity of their own personal attendance at *tuhseeldarees* and *kutcherees* merely with the view to the manufacture of certain documents and statements, the record of village administration must necessarily be imperfect, and I hope that this report will be considered in a measure *declaratory*. I therefore take this opportunity of asserting that the right of Government to all the forests and waste lands not included in the assessable area of the estates remains utterly unaffected by the inclusion of certain tracts within the boundaries of *mouzahs*; and that no one has a right, merely on account of such inclusion, to demand payment for the use of pasture grounds, or for the permission to cut timber or firewood. Neither does such inclusion interfere necessarily with the right of Government to accept offers for *nia-abad* leases. But, as ordered in the case of the Terai forests, so in the hills (where, too, *zemindaree* claims are rare), the inhabitants of the villages most adjacent to the tract, or having it recorded within their boundary, should have the first refusal of all such leases; and no grant of the kind should be allowed within a certain distance of the cultivated and culturable waste lands of inhabited villages; the distance to be fixed by the district officer, after receiving the report of the local *putwaree* and *canoongoes* as to the position and extent of the proposed clearing. If proper attention is paid to the subject of waste lands in Gurhwal, and every application for the privilege of redeeming them be carefully considered and decided on with reference to the above-mentioned declaration now made by the Settlement Officer, I am of opinion that the prosperity of Gurhwal, and the advance of its population and agriculture, and finally of its revenue, will be for the future even more satisfactory than during the years that followed the expulsion of the Goorkhas, and the return of the peasantry to their ancient homes. In every *puttee* there are one or two villages very thriving in character, and with surplus members who are available to become *paekasht* cultivators of neighbor-

bourhood has been too hastily declared to have claimed any tract beyond its real requirements for extension, pasture, or forest use; or whether a wise discretion has been used in giving a field for his industry to the introducer of foreign capital, the creator of valuable staples, and the employer of remunerated labour.

“ In all the discussions which have hitherto taken place, one fact has, I think, been too much lost sight of, *viz.*, that the demarcation of a reasonable and appropriate boundary for a village holding a nominal right to what may be considered an unreasonable and improper extent of waste land, does not dispose of the whole question of forest use. Many mountain tracts included within the nominal boundaries of particular villages are used by a whole neighbourhood of villages for the purposes of pasture, collecting of leaves, &c. This is more particularly the case in Central Kumaon (Palee and Baramundul) and in Lower Gurlwal, including the important pergunnahs of Barasen, and Choundkote. I hope I have said enough to prove that Mr. Beckett acted with judgment in following that part of his predecessor's policy which left Mr. Traill's recorded boundaries undisturbed, and which abstained from useless and perhaps mischievous demarcation which would have involved an enormous expenditure of money, time, and trouble, as this duty could only be performed by the Settlement Officer himself, and would alone have occupied his time for many years. At the same time, as shown by appendices 5 and 8, it is clear that care has been taken by the Settlement Officer to ascertain and record, for the benefit of Government and the public, all known sites of waste villages in the district, and all sites which, in his opinion, were suitable and available for tea planting. Mr. Beckett, however, has made a slight mistake in para. 8 of his report, where he says that the 4,417 mouzabs of ' appendix No. 1 contain all the recorded 5,500 square miles of the district of Gur Some portion of this estimated area is represented by the waste and forest in which he has himself noted in the same statement; and these so-called mouzah boundaries more or less accurately recorded.”

Concluding remarks on waste lands.

Para. 8.—“ It is highly probable that disappointment may be felt at the promulgation of the fact that large tracts of country, with good soil, in the vicinity of markets, and with facilities of cheap labour, are not available for English settlers; and that, as I have heard it expressed, the latter can only get the ‘leavings of the *paharees*.’ But in reality such disappointment can only be felt by those who have used their imagination rather than their reason, or who have omitted to consult the most ordinary sources of information. The Central and Lower Himalayan pergunnahs are not howling wildernesses, but have been for ages occupied by an industrious agricultural population. This people is in possession of those tracts which are easiest of access, and which yield the least difficult and most profitable returns to industry. The country so occupied is therefore not available for foreign *colonization*, even if its climate were suitable, which it is not. The tracts of country lying between these richer slopes and valleys and the untillable waste of the more inaccessible heights, are those into which the old occupants have hitherto been gradually extending their possessions; and it is a new thing for them to be told that such extension is an usurpation of State rights, and that they must give place to the dominant stranger, merely because, to the latter, the climate is more suitable and pleasant. The surprise of the inhabitants at the proposals of foreign settlers is certainly quite as strong as the disappointment of the latter in not finding the best part of the country at their disposal. Under proper management, *i. e.*, under a proper carrying out of the waste land rules in those provinces where the risk of interference with an occupant population is not an obstacle, and where the comparative sparseness of the population and the good sites available for settlers, the introduction of capital and labour will go hand in hand; and while the settler will benefit by the increase of his money and industry, the peasant proprietor of a few scattered and over-crowded villages of the old occupied tracts will obtain a more distant, but not quite foreign, plantation a cash return more assured, and more certain than his hire as a coolie at

Nynee Tal or Mnssoorie. Already more than 1,000 *paharees* are drawing monthly wages in Kutyoore, in Kumaon,—the very *puttees* described by Mr. Batten in 1846 as waste, and therefore as the most available for the experiment of tea growing. I hope that his similar expectations for Gungolee and Scera in Kumaon, and such comparatively waste tracts, may be realized in due time; but before tea planting can be placed on a secure and sound footing, the dream of obtaining from Government, on fee simple terms, profitable estates in the heart of the occupied country, must be abandoned."

49. Act XIX. of 1863 is not applicable to Kumaon. Separation of interests and responsibilities have never been recognized. The procedure of this Act is, however, observed in carrying out imperfect partitions among a brotherhood or in any village.

Partitions.

50. Cows and bullocks are small. They die off very much when disease comes to the district, and it is always most fatal when it has not come for some years. Cattle are not liable to get it a second time if they escape the first attack, but the loss is often very ruinous to the cultivator. No warning or expostulation will induce the people to take the most common precautions when the disease has attacked the cattle of a village; but if another village bring diseased cattle into their boundary, the whole village turns out at once to drive them off. I have seen the village cattle passing a sick animal dying from disease (*mdn*), and on my pointing out the folly and danger of allowing their healthy animals to get infection from the sick one, the people appeared to think it was unnecessary to adopt any precautionary measures.

Cattle.

Great loss by disease.

Apathy of the people.

From the southern and middle pergunnahs most of the cattle go to the Bhabur or Terai during the cold weather; and those people who do not cultivate in the Bhabur, generally go back in March to prepare for the khureef sowing and to reap the rubbee.

Grazing in the Bhabur.

The price of cattle has risen very much,—cows, which used to sell at Rs. 5 twenty years ago, now reach Rs. 10; bullocks, formerly worth Rs. 10, cannot now be bought for less than Rs. 18 to 20; and female buffaloes, which sold in Mr. Traill's time at Rs. 15 to 20, now fetch as much as Rs. 30 to 35, and I have known one to fetch as much as Rs. 60; while ghee has gone up from four seers to a seer and a half per rupee.

Prices.

51. There are climates of every variety between 1,000 and 12,000 feet above sea level, but the filthy state of the villages too often prevents the people enjoying their fine climate. In low valleys it is very hot; and in the midst of rice cultivation, malaria is common. In some places the houses are built against the damp bank, as a protection against the cold winds of winter; in other parts the cucumber, gourd and other crops growing in front of the doors exclude all fresh air, and the dung heaps or manure pits immediately in front of the houses, in hot weather and during the rains emit a stench which would kill any except those who have been brought up in it. I do not think the villages are so filthy as they used to be, but there is much room for improvement. The *mahamuree*, which used to recur so often with fatal effect, has been rare the last few years, and its appearance is now looked on as a warning to clean up all the villages. The typhoid fever (*sunjur*) has also been much less common.

Climate.

Uncivilized habits.

Room for sanitary improvement.

52. Small-pox, which used to pass over the district with more or less severity every year, has entirely ceased, and if a case does appear, there is an immediate cry or vaccination. Dr. Pearson deserves great credit for his complete success in introducing vaccination all over the district; and has probably saved the lives of thousands during the last ten years, as formerly a great many children died of small-pox. The old inoculators, who spread lying reports about the inefficiency of the English system, are almost all dead or silent, and the people have not only lost their prejudices, but appreciate the advantages of vaccination.

Small-pox.

Extinct.

53. I have frequently been asked if much "polyandria" existed in the hills; I may therefore here mention that in Kumaon polyandria and infanticide are unknown.

Polyandria.

54. There is a cart-road *viâ* Raneekhet from the plains to Almorah, and a cart-road to Nynee Tal. All the important parts of the district are connected with

Roads and bridges.

Almorah by good bridle roads suited to laden ponies. Fair bridle roads are within easy reach of all the tea plantations. All the difficult rivers have been bridged on the main lines of road. There are 27 suspension bridges, and the new kind of wire rope bridge introduced by Mr. Lawder is admirably suited to a hill country like Kumaon. A list of roads will be found in appendix No. 13. There are 25 staging bungalows in Kumaon.

Repair of roads.

District roads repaired by the personal free labour of the people.

Old and new modes of utilizing this free labour.

The necessity and advantages of the custom.

Skilled labour and materials.

Minerals.
Mining much less remunerative.

Causes.

Capital and improved methods necessary.

55. The important lines of road are kept up at Government expense, but it has always been the custom for the people to keep the district roads in repair by giving personal service, on the principle that the road is chiefly for their benefit, and the advantages are equally enjoyed by all. For instance, if villagers from the west go to the east, they find roads ready for their use on which they expended no labour, and in the same way, roads in the west are of use to men coming from the east. It is impossible to expect the Government to repair cross roads, and it is essential to the prosperity of the district that all parts should, as far as possible, be connected with the main lines. It used to be the practice to send a road jemadar, armed with an order to the putwaree to supply coolies to repair roads: but it was found that the weak suffered from the strong, or the more wealthy induced the jemadar to release them. As soon, therefore, as we were in a position to know the resources of each village in men, the old system was so far improved that the roads were divided off to the villages within reasonable distance. This merely assigned to each village or plantation a part of what under the old system many were required to do collectively. The putwaree or a jemadar is entrusted with the duty of seeing the repairs done. If any one refuse or neglect to do his part, it can be done by paid coolies, and the cost realized from the village or fee simple estate.

As all derive benefit from the road, all must combine to keep it in order; and if this excellent system, which has intersected the country with roads, had not been always in practice, we should have had very few roads in Kumaon. When a new road is made for the benefit of the country, the people within an easy distance have often been compelled to give a week's labor gratis; and I think it essential to the existence of the present roads, and affords the only hope of getting new ones, that this long established custom should not be allowed to die out. The people appreciate good roads and useful bridges (in the rains), but their petty jealousies would never allow of their agreeing to any combined effort unless by an order.

Bridges requiring skilled labour are put up at Government expense.

56. Iron and copper abound, but at the present value of labour the mines are worth very little. The *sones* or miners have, as a rule, given up their old trade and taken to contracts. The great attraction to miners in former times was the cheapness of grain in the Khetsaree valley, where iron was most extensively manufactured. This advantage no longer exists, for the market at Raneekhet has doubled the price of grain, and the miners would be no longer content to exchange their labour for the small profits on iron. Copper mines are in no greater favour. Formerly some villages where the miners reside were included in the mining leases of Kumaon and Gurhwal. These villages have been settled with the miners, therefore they are no longer servants of the contractor. Tea gardens and other labour markets offer much better terms than a contractor, who at the least possible expenditure, tries to make the greatest possible profit. These contractors know nothing about the science of mining, and they have no money to expend in penetrating beyond the worked-out galleries. In fact the mines have collapsed, and without considerable outlay no reasonable profit can be expected. Labour is expensive, and English copper can be bought at a cheaper rate in the Almorah bazaar than the local miners can produce it with profit. I expect nothing more from native petty contractors than a pittance which they can relize by the resident miners working when convenient to themselves, when they give half of the ore to the contractors and keep the other half. No doubt there is abundance of copper in Gungolee; but any mines, copper or iron, that are now worked, barely produce sufficient for local con-

sumption. Agricultural instruments are made for the people of the surrounding country, and a few copper vessels ; but all the mines in the interior are in remote places, and too far removed from a good market to be of much value.

Interior mines valued.

57. It is not the custom for hill-people in Kumaon to drink ; and unless they are taught, by having grog shops planted over the district, I do not think they will take to this demoralizing practice. I have always strictly prohibited the extension of grog shops, and limited them to stations where they cannot now be dispensed with. There is no doubt if grog shop contractors are not watched, they will, in a quiet way, encourage the habit of drinking beyond their licensed limits ; and having taught a few to drink, will apply for licenses. Such extensions should be vigorously opposed ; and, except at the stations hitherto supplied with liquor shops, I hope no others may ever be permitted in Kumaon. They are not required to check smuggling, and they cannot be required to introduce drinking habits among a people wondrously free from the vice.

Spirituous liquors.

Multiplication deprecated.

Bhoteas are utterly beyond the check of grog shops. They make their own liquor wherever they halt, but they do not sell it, or encourage other castes to drink. It is impossible to prevent their making liquor, and therefore useless to attempt to do so.

Bhoteas beyond laws.

58. Appendix No. 15 shows the number of tigers, leopards and bears for which the Government reward has been paid during the last thirteen years. In some parts, such as in Danpoor, Gungolee, Seera, and Kalee Kumaon, where there are immense forests, bears are still numerous, but with these exceptions there are, as compared with former times, very few bears left. In Seera, while Mr. Beckett was settling the *puttee*, one shikarree killed 13 bears and brought the skins for reward. This gives a good idea of the numbers of these mischievous beasts. A man-eating tiger occasionally creates great alarm ; but this is rare, and, as a rule, tigers which kill cattle are soon shot. Shikarrees now hunt for these destructive animals, and this keeps up the numbers for which rewards are paid.

Wild beasts.

Wild animals rapidly disappearing.

During the last 13 years, 479 tigers, 1,886 leopards, and 2,869 bears have been paid for. A great many more must have been killed, but not found. The amount paid for the destruction of the tigers, leopards and bears in 13 years, *i. e.*, from January, 1860, to December, 1872, was Rs. 20,413.

Number killed, and reward paid during 13 years.

59. Mr. Traill, in concluding a report on Kumaon and its inhabitants, wrote : —“ From the subdivided state of landed property which here exists, few individual land-holders have the means of acquiring wealth ; but though all connected with the soil are confined to a state of equality, their condition, as a body, is no doubt superior to that of any similar class of tenants in any part of the Company's territories.” If this was really the state of the Kumaonees upward of 40 years ago, it is much more applicable to them now. At the time Mr. Traill wrote as above, he stated that four lakhs of rupees had been expended in ten years among the labouring classes. I find that in addition to the revenue of the province—the alkaree, stamp revenue, the forest revenue, the revenue of the terai, and miscellaneous receipts—the large sum of 24 lakhs of rupees have been remitted in cash to Kumaon during the last three years, which gives an average of Rs. 8,00,000 for each year. No money is sent down to the plains.

State of the district and inhabitants 40 years ago.

Money spent in Kumaon in the past three years.

The large sums I have specified above, in addition to cash paid for remittances to other treasuries, and the probable amount expended on tea plantations, make a total of nearly 20 lakhs of rupees for each of the last three years ; and that sum has been expended in Kumaon. I entirely agree with Mr. Traill, and consider that Kumaonees are better off than any peasantry in the whole of India. With the increasing prosperity of Raueekheth and Nynee Tal, the price of grain or labour will not fall, while the prospects of tea cultivation are so hopeful that, as far as I can judge, there is every reason to look forward to still greater prosperity among the people.

Kumaonees at the head of all hill peasantry.

60. There is a great variety of castes if one were to attempt to subdivide them ; but the four classes, brahmin, rajpoot, bunniah, and low caste, embrace all. The best

Castes.

Decline of brahminism. class is that of rajpoot, in which kusea, and all between brahmin and bunniah, classify themselves. They are not much troubled with prejudices—a happy, good-natured set of people, more easy to lead than to drive. Brahminism is not so strong as it used to be. The brahmins are rapidly losing their power over the people; in fact, I believe that when those of the last generation still in existence pass away, their successors will feel at liberty to be much more liberal. The dooms are a very hard-working people, but their position has improved a great deal during the last twenty years, and they are certainly now very far removed from a state of slavery.

Dooms.

Munehars.

There are few Mahomedans except at the stations. There are only four villages of munehars (Mahomedans) in the district, descended from servants of the rajah's time, who were workers in horn. They call themselves Mahomedans; but, with the exception of acknowledging Mahomed, they are not much different from Hindoos, and I should say consult brahmins oftener than their prophet.

Territorial transfers.

61. Appendix No. 16 shows transfers of villages from one *puttee* and *pergunnah* to another; and the fact of villages in one *pergunnah* having been entered in another, from which they might have been several miles distant, is attributable in most cases to their having been in the *thokedaree* of one who lived in the other *pergunnah*. This has now been rectified as far as possible, so as to give a compact division to each *putwaree*.

Waste villages.

62. Appendix No. 17 gives a list of waste villages which were included in the last settlement. They are small, and probably never were, or if ever, very seldom, cultivated. In time they will be taken up on *nia-abad* leases.

Goonth assignments.

63. Appendix No. 18 gives an abstract of land assigned to temples. These religious endowments are very numerous. I have shown the large ones separately, and have only given the numbers of the smaller assignments.

Fisheries.

Very few exclusive rights.

64. The right of netting fish in a few parts of the western Ramgunga river, in *pergunnah* Palee, was sold to private parties by Mr. Traill, but, with these exceptions, no individuals have exclusive fishing rights in any rivers in Kumaon. It is usual for the villagers on either side of a river to kill the fish in any way they can; but they can only do this on small rivers like the western Ramgunga, Kosee, &c., and it is probable the long established custom would be considered by them a sufficient right to prevent strangers fishing within their boundaries.

Although the Kosee river bed is perfectly dry for months below Ramnuggur, the river is stocked with fish every year as soon as the rains commence.

Manufactures.

65. There are no manufactures worth noticing: good blankets are made, but none exported; hempen bags are made, and almost all are sold in the district, but few *mad-*ing their way to the plains; very little cotton cloth, of the coarsest description, is made. The working classes are always employed in their fields, or in bringing fodder for cattle. There are no good artizans, except perhaps some fair masons; and yet the excellent buildings at Raneekhet, and the handsome mission school building at Almora were the work of these common masons.

**Implements of husbandry,
rude.**

66. Implements of husbandry require no notice. They are of the rudest description; and, with the exception of the iron point to the plough, are made by the people themselves. The *hul*, or plough, generally lighter, is very similar to that used in the plains. The *maia*, a flat thick piece of wood on which the driver stands, is used to smooth uneven ground, and the *doormut*, to break the clods. The *dhungala*, like a large rake, is then employed to clear the weeds and rubbish, and when the grain is sown, a light *maia* is taken over it to give the seed a slight covering. A *kootela*, or hoe, is used to scrape the ground when too steep for bullocks to work.

Water mills.

Although water mills do not belong to land revenue, I would here explain ~~tha~~ a small tax has been put upon such mills, and the amount thus realized should be

credited to local funds, by which means it may be used for the benefit of the people who contribute it. Hand mills are seldom used in Kumaon. A small mill is erected at the cost of Rs. 5 to 10 on any ravine or river from which a stream can be diverted so as to give the requisite fall, according to the volume of water. The villagers resorting to such mill have to pay $2\frac{1}{2}$ seers in every maund of grain they bring to it, and this payment gives a very large profit. No one has a better right to monopolize the water than another. At the same time, the man who erects such a mill asserts the right of preventing the erection of another which shall interfere with his. Thus the owner of a mill or mills collects from the villagers a large profit to which he had no more right than others; and, to prevent disputes, as also to ascertain how many mills existed, as well as their position, all mills have been taxed at the rate of Re. 1 to Rs. 3 per annum; and this money, realized indirectly from the whole of the people, should, I think, be devoted to their benefit.

Rights.

Mills, why taxed.

Proceeds should form a local fund.

This money might be expended in alleviating much suffering, by supplying medicines. A great many wished me to provide for this by adding a small percentage to the revenue; but as I was not Settlement Officer, I did not see clearly how this could be done. A few simple medicines, which could not be abused, would save hundreds of lives every year in distant parts, beyond the reach of dispensaries.

For what purposes.

1. Medical aid.

Rest-houses and a supply of water, where these are urgently required, would afford valuable relief in some places.

2. Rest-houses and water.

There are many parts of the district where the land might be irrigated; but in consequence of want of unanimity, and the inability of any one to advance the money, nothing is done. This fund might advance the money; water-courses might be constructed by which the land would be made more productive, and the return certain; and when such works were completed, those who received so much benefit would gladly repay the money, which would be similarly made useful elsewhere. There is practically no limit to these useful works, and no one could be more qualified for the work than Mr. Beckett, in charge of the district.

3. Irrigation works.

I have suggested a few of the many ways in which this local fund could be usefully applied, but all details might be left to the local funds committee, who would submit their proposals for the sanction of Government in the usual way.

Administrative control.

There are so many ways in which this money could be expended for the good of the people, that it will be necessary to consider them all, and adopt those by which the greatest possible advantage can be secured to the many by whom the contributions are made in the smallest dribblets.

68. I have not been able to furnish a map of the district, as it is not ready. A complete one is being prepared by Colonel Walker, R.E., Superintendent of the Great Trigonometrical Survey, for Mr. Atkinson's *Gazetteer*, with all Mr. Beckett's corrections.

Map of Kumaon.

69. In conclusion, I would wish to bring prominently to the notice of His Honor the Lieutenant-Governor the eminently good services of Mr. Beckett, who, in bringing his very difficult work to a conclusion, has ruined his health. This excellent officer has the peculiar gift of devoting his whole mind to the work on which he is engaged. He came to Kumaon immediately after completing the revision of the Gurhwal settlement; in 1867 his health succumbed, and he was obliged to proceed home. He returned in 1868, and from that time to the end of September last he worked as few men can work, to complete the settlement. Having done so, his health has again failed, and he has been obliged to go home.

Mr. Beckett.

Mr. Beckett has done his work well, and it has the merit of being completely his own,—free from the defects of other influence. What he has done is clear and complete, and I am glad this most important work fell into the hands of one so well qualified to perform it.

I regret extremely that in benefiting the Government service and the people he has suffered himself, and I trust he may return to Kumaon with renewed health to enjoy the reward of his valuable services.

KUMAON COMMISSIONER'S OFFICE: }
The 7th March, 1874.

I have, &c.,
H. RAMSAY,
Commissioner.

XIV.

Summa of the Kumaon District—(concluded).

[illegible]

For J. O'B. BECKETT,
Settlement Officer.

H. RAMSAY,
Commissioner.

No. 923 of 1880.

RESOLUTION.

REVENUE DEPARTMENT.

Dated Naini Tal, the 1st June, 1880.

READ :—

Letter from the Secretary to the Board of Revenue, North-Western Provinces, No. 1795N., dated the 14th September, 1875, submitting the report on the revision of settlement in the Kumaun district carried out by Mr. J. O'B. Beckett.

OBSERVATIONS.—The settlement of Kumaun presents many contrasts to similar work in the districts in the plains, the systems of demarcation, measurement, assessment and record being different in numerous essential points.

These differences originate in the distinct character of the country, and of the tenures on which land is held.

In the level country of the plains every acre of land, whether barren, culturable, or cultivated, is carefully surveyed, and exact boundaries of each property are laid down and marked.

In the hills, except in the valleys of the larger rivers and on some more gradual slopes, culturable land is the exception ; the country is occupied by successive mountain ranges, large tracts too precipitous even for the terraced fields of the hill men, or lying at too great an altitude for any cultivation beyond a precarious crop of barley, are found even in the more populous and reclaimed tracts ; while, elsewhere, malaria or scanty population render large areas practically barren.

2. Every piece of land, even the inaccessible snow peaks on the Thibet border, is included in the limits of some village ; and in 1823 the village boundaries were roughly described and recorded, and as the boundaries are generally natural, following the course of a stream, the centre of a ravine, or the crest of a ridge, these descriptions are still sufficiently accurate to enable the boundary to be usually traced and identified.

But these village boundaries are little more than convenient sub-divisions, and do not mark off lands the exclusive property of the recorded proprietors, as in Kumaun the rights of the State, as the supreme proprietor of the soil, are fully admitted and have never fallen into disuse.

3. Under native rule, up to 1815, private property in land was hardly recognized ; it is true that in the more remote tracts but little interference with the occupant cultivators was made ; but in the neighbourhood of the capital, grants of land were made and revoked at the will of the ruling power. Sir H. Ramsay writes :—

“ As stated in Mr. Traill's report, the paramount property in the soil previous to 1815 rested with the sovereign,—not theoretically only ; for the unrestricted power of alienation was exercised at the will of the ruling power in the time of the Rajas, and to the end of the Goorkhalee Government. A village was given to an astrologer, a bard, a cook, or a barber ; and the *asamis* in possession, whatever their former status, became to all intents and purposes the cultivators of the new owner. If they did not like the *muafidar's* terms, they moved elsewhere, and they

retained no rights in the land which they could assert to the prejudice of the grantee."

"Again, this grantee might be ousted in the same way, at the caprice of the ruling power, if the village was required for any other favourite."

4. In the early settlements following our conquest of the province the lease was supposed to confer proprietary rights on the representative from whom engagements were taken, but between 1825 and 1835, the people began to feel that they he'd some rights in the land. Mr. Batten's record of right educated them still more, and soon the courts were flooded with cases relating to land; the people are naturally most litigious, and now, in the central parganas, there is hardly an acre of cultivated land the title to which has not been the subject of a civil suit. Thus, the right of property in cultivated land is now fully recognized and thoroughly understood by the people, but outside the cultivated area the villagers claim only a sufficient area for grazing and for the supply of wood for their houses, implements and fuel. So long, indeed, as the area nominally included in the village area is unappropriated, the proprietors of the village have a preferential right to the grazing and natural products, but these rights do not extend to the sale of wood, and sometimes several villages have prescriptive rights in the waste nominally included in the area of one.

The rights of Government in the waste are paramount and undisputed.

Government may mark off and separate any tract as a reserved forest, a tea plantation, or for any other purpose, and the proprietors of the cultivated lands do not consider that any interference with their rights has been made so long as an adequate proportion of waste is left unappropriated.

5. No village demarcation has ever been carried out in Kumaun.

The question of the expediency of demarcation of boundaries was discussed at the conclusion of the Garhwál and commencement of the Kumaun settlement.

The Board of Revenue were at first inclined to think an exact demarcation of village boundaries, accompanied by a demarcation of the waste lands so as to exclude and leave clearly-defined all tracts available for settlers, might be expedient, but, after further reference to the Commissioner and consultation with Mr. J. H. Batten, found that the work would occupy for many years the time of a European officer specially deputed for the task, and might also possibly interfere with the prescriptive rights of the people and check extension of cultivation during the term of settlement.

Mr. Beckett's treatment of the subject in Garhwál was approved by Government, and the same system has now been followed in Kumaun.

No village demarcation has been made, and waste tracts are only marked off as required.

6. Mr. Beckett has, it is true, marked off a few sites as suited for tea plantations, but some of these, it appears, are situated at too great an elevation for profitable cultivation, and Sir H. Ramsay considers the areas demarcated to be generally too small, and these sites should not, of course, be considered as the only sites available in the district ; probably a careful examination for this special purpose would disclose more such sites, some of them perhaps preferable to those selected by Mr. Beckett.

No general rules defining the parts of the country in which land is available for tea plantations can be laid down ; each application must be disposed of on its own merits after careful examination and inquiry on the spot by the district officer, but Sir H. Ramsay is no doubt right in considering that intending settlers will find openings of greater promise in the more distant and less thickly populated parts of the district.

Though the right of Government is supreme and absolute, care should be taken that, in separating tracts of waste, no just ground of complaint be given to the occupants of reclaimed land ; and that not only is sufficient waste for their immediate requirements relinquished, but that, whenever it may be possible to do so, reasonable room for extension of cultivation is also given. To this necessity Sir H. Ramsay is most fully alive, and from his report it appears that, in the more advanced tracts, where alone difficulty might arise, very few sites remain available for new settlers.

7. The Commissioner bears cordial testimony to the immense benefits conferred on the country by the introduction of the cultivation of tea.

“ The Kousani and Kutyoob companies have changed Kutyoob from a desert into a prosperous tract * * * * The Dunagiri plantation has thrown a vast amount of wealth into the surrounding country * * * * The Berinag and other smaller plantations have done much for Gunguli. Julna has in the same way greatly benefited the country east of Almorah, and there are other smaller plantations which have been of immense benefit to the district.”

In view of gain to the country such as Sir H. Ramsay describes, the Board are amply justified in considering that any disadvantages which might possibly result from limiting the area within which the village proprietors might break up new land are more than compensated by the benefits which follow the introduction of capital into the district.

8. Though neither a demarcation of boundaries nor a complete village measurement has been attempted, yet a very great advance has been made in that all the reclaimed area in which any real right of property exists, has been surveyed and recorded—no measurement even of the cultivated area had ever before been made. The settlement of 1823 was founded on what was called a guess measurement, and no measurement was attempted at Mr. Batten's settlement.

Sir Henry Ramsay writes :—

“The only record of any kind, as regards area, was the guess measurement book of 1823. It was prepared in 1823 by native officials, who sat on commanding

positions and summoned the *pudhans* of all villages within sight or easy distance, when they wrote down from their information the names of the *thokes* of land and their areas ; and on these estimated areas all subsequent settlements were based. But even this was a vast improvement on the utter blank of former times."

9. At the recent survey all terraced land which had not relapsed into forest was measured, but forest clearings or slopes only occasionally cultivated were excluded.

The area ordinarily permanently cultivated was divided into three classes—irrigated 1st class, dry, and 2nd class dry land.

Two other divisions appear—"waste" and "casual cultivation" or *ijrán*.

The waste appears to agree closely with the "fallow" or "recently abandoned" of the plains. "By waste is meant uncultivated terraced land, and does not refer to grassy slopes or forests included within the nominal boundaries of a village." In the village statements the waste was entered with the cultivation under its appropriate class, the areas shown as irrigated, 1st dry and 2nd dry, including actual cultivation and waste, while other columns show the areas divided into cultivation and waste without regard to quality.

The casual cultivation was entered independently and was not classified ; it is land not regularly cultivated, but still more than *casually* cultivated, as the settlement officer assumes that one-half is cultivated in each year.

The areas of each class taken from the appendices are as follows :—

	Total area.	Culturable.			Cultivated.			Total.
		Waste.	<i>ijrán</i> .	Total culturable.	Irrigated.	1st dry.	2nd dry.	
Total <i>khalsa</i> ...	267,178	41,570	40,326	81,896	25,473	108,420	51,389	185,252
Grand total including <i>khalsa</i> , <i>sadabarat</i> , <i>mudafi</i> and <i>guroth</i> ...	286,670	44,958	43,653	88,611	26,925	116,155	54,979	198,059

The total area means, of course, the total area measured, which is about 8 per cent. of the total area of the district, some 92 per cent. being unreclaimed forest and waste.

There are 6,352 villages, the average measured area for each village being only 45 bisis ; and as the cultivation of each village is commonly scattered in small patches, and the individual fields are generally of very small size, the labour necessary both for survey and inspection must have been very great.

10. The measure of superficial area in use in Kumaun is the *bisi*, established by Mr. Traill, the sub-divisions being the *nali* and *anna*. The *nali* had varied in size, as the local *bigha* does in the plains, but was supposed to represent the quantity of land for which two seers of seed sufficed. After many inquiries and trials Mr. Traill established standard measures, which are now thoroughly known and recognized throughout Kumaun and Garhwál.

12 yards \times 20 yards = 240 yards or one nali; 240 yards \times 20 yards = 4,800 yards or one bisi: fractions of a nali are shown in sixteenths as annas, 60 square yards being 4 annas, 120 square yards eight annas, and so on. The bisi is thus 40 yards less than the acre and in the report and statements acre and bisi are used as equivalent terms; but in the report and its appendices the areas are not shown in bisis, nalis, and annas, but in bisis and annas, the nali thus disappearing and the anna becoming one-sixteenth of the bisi instead of the nali.

This change has been made in the statements for facility of account, as, fitting in with Mr. Beckett's system of assessment, it enables areas to be readily read as rupees. The change must have entailed a good deal of extra labour, and as the village papers show the areas in nalis and annas, mistakes and confusion would appear probable from the concurrent use of two different systems of recording the fractions of the bisi; and perhaps rather the more so, as Mr. Beckett has explained that "in all the village accounts only nalis and annas are recorded, no mention being made of bisis as the individual holdings are small; but in the settlement accounts, for facility of account instead of having three columns of figures, the nalis are transformed into bisis and annas."

11. Mr. Beckett's system of assessment is a peculiar one, and his assessment statements of a very complicated character, but with the aid of the exemplar statement given in page 7 of the Commissioner's report, the system may perhaps be rendered intelligible.

The Commissioner has, by an oversight, made it appear that this rate was assumed per acre of second quality dry land.

The foundation of all the calculations was the assumption that on the average one rupee per bisi would be a fair revenue rate for the total measured area.

12. Considerable labour appears to have been expended in ascertaining the average rates of produce for each kind of soil, and the results are given in para 7 of the Commissioner's report. As rents, where rent is paid, are usually in kind, it might be expected that the assessment rates could have been deduced from the produce averages.

"In irrigated land it is very common for the proprietor to take half of the gross produce; in first quality unirrigated land it is usual to take a third; while in second-rate unirrigated land, a fourth or fifth of the gross produce is taken."

For second class dry land the average value of each crop ranges from Rs. 13 to Rs. 16, and three crops being usually taken from the land in two years, the average annual value of the produce ranges from Rs. 20-8 to Rs. 23-8.

Supposing the land to yield two inferior crops, say of *mandua*, and one crop of wheat, the annual value would be Rs. 21, and at the lower rate of rent given, *viz.*, one-fifth of the produce, the average rent-rate should be Rs. 4-3-2 per bisi, the average revenue rate Rs. 2-1-7, or, in even figures, Rs. 2 per bisi.

Similarly worked out, average revenue rates for irrigated land should be at least Rs. 15. and for first-class dry land at least Rs. 6 per bisi.

Applying these rates, and valuing the casual cultivation at half the lowest rate, an all-round revenue rate of Rs. 4-6-5 per measured *bisi* results.

Soil.		Area in <i>bisi</i> .	Rate. Rs.	Revenue. Rs.
Irrigated	...	25,473	15	3,82,095
First-class dry	...	108,420	6	6,50,520
Second-class dry	...	51,389	2	1,02,778
Casual	40,326	1	40,326
Waste	...	41,570
	Total	<u>267,178</u>	<u>4 6 5</u>	<u>11,75,719</u>

Produce rates commonly prove a dangerous foundation for practical assessment, and it would have been utterly impossible to impose any such revenue ; but the fact that these ascertained produce rates would thus apparently justify an all-round revenue rate of Rs. 4-6-5, at least tends to prove that the assumption of a rate of one rupee was certainly moderate.

Mr. Beckett in a memorandum prepared in 1872, wrote :—

“ When land is sublet to tenants-at-will in the hills, the owner is supposed to receive half the crop in good, and one-third of the crop in inferior, land, and therefore Government ought to receive one moiety of the owner's receipts, but practically this would be an excessive rent, and as, by taking about one-sixteenth of the owner's nominal receipts, the revenue of the zila would be doubled, it was settled that an average rate of one rupee per acre of total area should be the assumed rate for this settlement.”

The produce rent-rates are paid only by tenants-at-will, who hold but little of the area, the land being generally in the hands of cultivating proprietors, who have never paid more than the quota of revenue due from their holdings. Except these, the rack-rents paid by tenants-at-will, no *data* existed in Kumaun from which average rent-rates could be deduced. These produce estimates were not really used as any guide to the all-round rate at which the revenue should be assessed, but only as an index to the proportion the rates for the several soils should bear to each other, though the fact of the estimates being put forward so prominently has caused some misconception of the foundation of the settlement and its real pressure. The Commissioner and Mr. Beckett, from their local knowledge, consider that, on the whole, the revenue might with safety be nearly doubled, and as an all-round rate of one rupee on the measured area gave a result not much more than double the former revenue, this rough rate was assumed as the basis of the assessment.

13. It was held that irrigated land should pay three times as much as, and first-class dry land 50 per cent. more than, second-class dry land, and that casual cultivation should pay half the rate of second dry, Mr. Beckett writing :—

“ The crop outturn is not quite in that proportion, but I have found by experience that the other advantages of the better lands require them to be rated higher than the crop outturn rate which is about 6, 4, 3, instead of 9, 4½, 3 which I have adopted.”

14. Starting with these assumptions, Mr. Beckett proceeded to reduce his areas to a common denomination, that of second dry land ;

the measurement papers gave the actual areas, and to the area of permanent cultivation was added double the area of the irrigated land and half the area of the first-class dry, the result being the "area calculated as second quality," as in the following example (No. 1 in the Commissioner's exemplar.)

				B.	A.
Classified area	{	Irrigated	10 8
		First dry	41 8
		Second dry	32 8
				<hr/>	
					84 8
Casual cultivation		15 8
				<hr/>	
Total measured area		100 0
				<hr/>	

From the classified area 16 *bis* of waste were deducted, leaving the permanent cultivation *bighas* 68-8, to which had to be added 21 *bighas* on account of the irrigated area, and *bighas* 20-12 for the first dry, making the "additions for quality" of *bighas* 41-12 shown in column 18, and the total of the actual area of *bighas* 68-8, and of the additions for quality gives the value of the permanent cultivation reduced to the standard of second dry (*bighas* 110-4, as in column 19).

The addition of *bighas* 7-12, half the area of casual cultivation (half cultivated each year) gives the second standard area of 118 *bighas* entered in column 20 : then, as a means of attracting attention to unusual proportions of waste land in column 21, is shown a third standard area made up of three-fourths of the total area *plus* the additions for quality.

The variations between columns 19, 20, and 21 would draw attention to any undue excess of waste or casual cultivation.

15. The rate of one rupee per measured *bisi* having been assumed, the corresponding rates for each of the standard areas were worked out on the district totals by simple proportion, and the rates equivalent to the rate of one rupee on total area were thus found to be as follows :—

	Rs.	a.	p.
On permanent cultivation + increase of quality (column 19) ...	0	14	.6
On above with further addition of half the <i>ijran</i> (column 20),...	0	13	6
On three-fourths of total area + increase of quality ...	0	13	7

each of these rates applied to the district totals should give the same result as the rate of one rupee on the total measured area.

16. Population is so important an element in the revenue-paying capability of a Kumaun village, that Mr. Beckett did not apply these average rates in the assessment of any village till he had corrected them further according to the village population.

He made out four population rates for each village : the density per 100 *bis*—(1) of total measured area ; (2) of permanent cultivation ; (3) of permanent cultivation + half casual cultivation, and (4) of three-fourths of total area.

He then worked out rates bearing the same proportion to the district averages given above that the density of village population bore to the district density, and as the average trial village rates took the mean between the rates thus arrived at and the district rates.

Thus in example 1, the village density per 100 acres of permanent cultivation is 205·8 (column 23) the district average being 195 and the district average rate Rs. 0-14-6. Then, $195 : 205·8 :: Rs. 0-14-6 : Rs. 0-15-4$; and the mean of these two rates or Rs. 0-14-11 ($Rs. 0-14-6 + Rs. 0-15-4 = Rs. 1-13-10 \div 2 = Rs. 0-14-11$) is taken as the trial rate to enter in column 28, the jumma by this rate being entered in column 29. The other trial rates entered in columns 26, 30, and 32 are similarly obtained; the variations from the district average depending on the variations in population average shown in columns 22 to 25.

Mr. Beckett thus, in his detailed assessments, did not use special soil rates, but, in effect, the additions for quality gave exactly the same result; the variations in the trial jummas showed the quality of the soil, the amount of waste or casual cultivation, and density of population. The examples given by the Commissioner, it may be observed, do not show fully the effect population may have on the rates, as in all these examples the district average of 141 is assumed as the density per 100 *bisis* of measured area. The rate in column 26 is therefore in all the examples the assumed average district rate of one rupee, and the other rates show greater uniformity than would be the case if six actual villages had been taken from different parts of the district. In columns 22 to 32 and in column 40 the dots evidently mean "*ditto*."

Column 34, which is not filled up in the exemplar table, gave the mean of the four trial rates, and from Mr. Beckett's memorandum it appears that he used further population averages and fresh calculations depending on the proportion of resident and *pahikashit* cultivators, but this further process is not illustrated in the exemplar table.

17. Mr. Beckett thus had a most formidable array of rates and percentages for each village, intended to bring to notice the most minute variations caused by any departure from the average condition of soil and population.

The preparation of these tables formed the mechanical part of assessment, and as these complicated tables all depend on the original rough assumed rate of one rupee per measured *bisi*, and include no corrections for natural variations in quality, Mr. Beckett had to depart widely from these trial jummas in his actual assessments.

To quote again from Mr. Beckett's memorandum :—

"Here ends the mechanical part of the operation. Local knowledge must now come into play, and it will decide when to fix a rent higher or lower than what the four columns show to be an average rent. Large fields are less costly to cultivate than small ones; on steep hills, the terrace walls are higher and more costly to keep in repair; the soil near the top of the hill is generally poorer than of the bottom, though sometimes this is reversed, and the middle of a hill is often the best; a bird's eye view of every village is necessary to find out this point.

"I have found it necessary to split up one village into two or three parts, and fix separate rates on each block on account of its situation on a hill side, but it is not often required to do so.

"The nature of the rock forming the substratum has to be thought of, clay estates generally give a fertile but light soil which suffers in a drought. Limestone rock gives a heavy clay soil, and when it is much impregnated with iron becomes almost sterile, but when the clay is pale red or brown it is very rich, on gneiss and granite rocks extremes of soil meet, where it is old and disintegrated it is very rich but lately disintegrated it is very poor. Slate rocks are less abundant in springs than granite or limestone.

"Forest villages where bears and deer are abundant, require very low rents. Fever villages, if the cultivators are obliged to live in them, must be low but not if they have two sets of houses, one up the hill."

18. Sir H. Ramsay considers it would have been impossible to use pargana rates on account of the variations in detail but Mr. Beckett's settlement professes to be based on average rates, and Sir Henry explains how the average rates were used, one of the main differences being that the Kumaun rates were not pargana but district rates, and therefore undoubtedly much less suited for rigid application than the more varied pargana rates used by other settlement officers.

19. The rough rate of one rupee on the measured area, the foundation of all Mr. Beckett's calculations, gives a rate of Re. 0-14-6 on the standard or calculated area of second quality, and therefore the soil rates really used were—

			Rs. a. p.
Irrigated	2 11 6
1st dry	1 5 9
2nd dry	0 14 6
Casual cultivation	0 7 3

Considering the arbitrary assumption on which all the calculations rest, and the infinite variety of conditions operating to render average results unsuitable, it may well be that, for practical purposes, the application of these soil rates, perhaps modified roughly in proportion to the density of population, would have given results as useful as those to be found in Mr. Beckett's tables, and the assessment statements could have been compiled with far less labour and would have been more intelligible; the figures could have been more readily handled, and some such system would undoubtedly be preferred by most officers, but Mr. Beckett was thoroughly at home in the system he had himself worked out, and long practice enabled him to use his tables with facility, while it is clear that he never fell into the error of looking on the trial rates and jummas as more than rough approximate estimates.

20. From Mr. Beckett's long and intimate knowledge of the district and the experience gained in the settlement of Garhwāl, he commenced work with the most thorough acquaintance with the country and the people, and in carrying out the settlement he personally inspected every village in the district; as he completed each *patti*, or group of two or three *pattis*, the assessments were declared in the presence of the people, and their objections were heard, discussed, and answered at the time.

There is no danger of the peculiar circumstances of any village having been neglected or overlooked.

21. The village was the unit for assessment, and the revenue assessed on the village was distributed over the component individual holdings in proportion to the area of each holding reduced to the common denomination of second class dry, except in a few cases where the proprietors of a village preferred a distribution according to their several shares.

22. The total of the actual assessments came out considerably below the result by the rates assumed at the commencement of the settlement, as is shown by a comparison of the assumed with the actual rates for the total *khalsa* area.

		Area in bisis.	Assumed rate.	Actual rate.
			Rs. a. p.	Rs. a. p.
Actual areas ...	{ Total measured area ...	267,178	1 0 0	0 13 10
	{ Permanent cultivation ...	185,282	1 7 1	1 3 11
Calculated areas at 2nd class dry quality.	{ Total measured area plus ad-	372,334	0 11 6	0 9 11
	ditions for quality.			
	{ Permanent cultivation plus additions for quality ... }	290,438	* { 0 14 6 } (0 14 8)	{ 0 12 8
	{ Ditto including half the casual cultivation.	310,601	0 13 6 *(0 13 9)	0 11 11

The assumed rates pointed to a revenue of Rs. 2,67,178. The final jumma actually assessed is only Rs. 2,30,628.

The difference is partly accounted for by additions made to proprietors' *malikana* and to *thokdars'* dues, and by reductions made for political or other reasons on the assessment of certain properties, as in the Askot *tahya* and in Talla Charal and Dharon, but no very close adherence to the rough estimated revenue could be expected.

23. The jumma of the previous settlement was Rs. 1,27,109, that now imposed is Rs. 2,30,628. The increase in revenue of Rs. 1,03,518 is at the rate of 81.43 per cent, an enormous increase, and although the revenue, compared with the produce and the theoretical rental value of the land, may even now be very light, the increase is probably quite as much as could safely be taken, and the Board agree with the Commissioner in holding this opinion—"with an average yield valued at Rs. 21 from an acre of dry land, second quality, the average incidence of the Government demand on lands of all descriptions of only 11 annas 11 pie seems very light." General Ramsay writes:—

"I am quite satisfied that the assessments shown in the accompanying statements are light, though in consequence of their having been raised so high compared with old jummas, I consider them sufficiently high." Doubtless General Ramsay is right, doubling the jumma is equivalent to a very considerable reduction in the payer's income. The irrigated *khalsa* land forms only 13.8 per cent. of the permanently cultivated *khalsa* area, (*i. e.*, 25,472 out of 185,282 acres). The Commissioner mentions several causes which render cultivation in the hills more precarious than in the plains,

* The assumed rates were Re. 0-14-6 and Re. 0-13-6, but on the areas given in appendix XIV. the rates work out Re. 0-14-8 and Re. 0-13-9. The difference is probably due to a difference in calculation of the standard areas. In the appendix no addition for quality is made on account of the waste area. In the village statements and probably in the statements from which the average rates were deduced, the waste was included in the classified area under its proper designation, and when again deducted was only deducted as if all were composed of second dry soil. This may be the explanation or the difference may only be due to corrections in the total areas.

where those causes do not exist, at any rate to the same extent, viz., floods, landslips, cattle-disease, mortality among cultivators. The loss of assámís or cattle might, the Commissioner states, imperil the existence of a village, and light as the assessments are, prompt relief may often be necessary."

The average incidence of the revenue on actual cultivation is Re. 1-3-11 per *bisi*, the rate of Re 0-11-11 taken by the Board being the incidence on one of the calculated standard areas not on the actual area.

24. Kumaun is the very last district that could be assessed on *a priori* conclusions, as to produce or rental value, and the rise in revenue is probably quite as much as could be safely imposed. In the hills the settlement is not made with landlords collecting rentals from a body of tenants, but practically each cultivator is proprietor of his own holding, and pays the revenue assessed thereon. Enhancement of revenue therefore falls directly on the cultivating body, and, as it is, including cesses at ten per cent. on the revenue, now imposed for the first time, the enhancement is nearly 90 per cent., and commonly 5 per cent. on the revenue is paid to the *padhan*, corresponding to the *lambardar* of the plains, while the permanent tenants pay 25 per cent. *malikana*. Statement No. 5 (Vol. II., page 20D.) shows that tenants-at-will form but a very small proportion of the cultivators, and that the great bulk of the area is cultivated either by proprietors or by permanent tenants, and enhancement of revenue falls as directly on the permanent tenants as on the proprietors. 3,060 villages are cultivated solely by proprietors, 543 solely by permanent tenants, and only 22 solely by tenants-at-will, and in the remaining 2,727 villages cultivated partly by proprietors and partly by tenants, the area cultivated by tenants-at-will can form but a small proportion of the total.

25. The Commissioner states that "there is no tenure corresponding to what is known in the plains as zamindari," and the tenants, as the rule, are rather in the position of *biswadars* or inferior proprietors under a *talúqadari* settlement than in that of tenants in the plains. Their payments are fixed at the settlement, but their position differs from that of the proprietors in that, in addition to the revenue so fixed, they also pay certain payments known as *malikana* to the proprietor.

Some ex-muáfidars had acquired proprietary rights, and existing muáfi rights, as the rule, include proprietary rights ; but excluding these cases and "some of the more powerful proprietors whose ancestors, very powerful men when Kumaun first came under British rule, had at once assumed the position of proprietors, which they steadily maintained and improved on every opportunity, it may be said that the proprietary right is vested in those whose ancestors occupied the land at the time the province was taken from the Gurkhas, and who have advanced the cultivation from its former backward state to its present prosperity, or in another class who, by their influence and money, or by their own labour, have changed thick forests into prosperous villages."

The Commissioner thus writes of the proprietors and of the permanent tenants ; he states : "the permanent tenants can never be disturbed or interfered with by the enhancement of rent. In fact, these tenants

are in all respects equal to proprietors, with the exception that they cannot sell their holding ; and they pay a small sum in addition to the quota of revenue due from the land recorded in their names."

The land in Kumaun may be said to be generally in the hands of peasant proprietors, the status of the *káhaikars* or permanent tenants being rather that of proprietors than of tenants, their payments similar to the payments made by the proprietors.

26. The revenue was assessed on the same principles whether the village was held by proprietors or permanent tenants, but the latter pay 25 per cent. extra under the name of *malikana* as the proprietor's share of the profits. As the general rule the proprietors, where they exist separate from the cultivators, only receive one-fifth of the payments made by the cultivating community, but in exceptional cases the Commissioner revised Mr. Beckett's arrangements and considered the proprietors entitled to a higher percentage.

Formerly the *malikana* had been chiefly paid in the shape of fees and perquisites, but these payments of goats' legs or breasts, fees on occasion of marriages, or heavier dues in grain or money, have been commuted to a fixed percentage, generally 25 per cent. on the revenue.

In Garhwál, the *malikana* never exceeded 20 per cent., and this Mr. Beckett considered " much more than the proprietor was ever entitled to demand ;" but in Kumaun, the general rate is 25 per cent., and occasionally from 50 to 100 per cent. has been allowed.

The customary dues were found to be higher in Kumaun as might be expected, the proprietors, especially near Almórah, having more influence and power, while cultivators were not so scarce as in Garhwál, and also in Kumaun there were more proprietors of old families in favor of whom, from political or other considerations, the Commissioner deemed it advisable to depart from the general rule fixing the *malikana* at 25 per cent.

In these cases, where higher percentages were granted by the Commissioner, as the payments already fixed by Mr. Beckett, whether styled rent or revenue (the terms being used as almost synonymous by Mr. Beckett and the Commissioner), were commonly considered to be as much as could be paid by the resident community, part of the extra payments to the proprietor had to be made up by a reduction of the Government demand.

Thus, in a case where Mr. Beckett had fixed the revenue at Rs. 66, and the *malikana* at 25 per cent. Rs. 16-8-0, making a total payment of Rs. 82-8-0, the Commissioner held the proprietor entitled to 50 per cent ; but as he held the village could not pay Rs. 99, he reduced the revenue to Rs. 56, making, with Rs. 28 *malikana*, a total payment of Rs. 84.

The Commissioner explained that he could not in these cases be guided by any fixed rule, beyond that of giving under the new settlement a fair profit to the proprietor compared with what he had enjoyed under the past settlement.

The reduction in Government revenue caused by these alterations of *malikana* effected by the Commissioner is trifling, amounting to less than Rs. 1,900 for the district; and as the village payments had been fixed, not as a part of an estimated rental, but really at what it was supposed the villagers could regularly pay, any increase to the proprietor's profits could not but come, in part, from the pocket of Government. In very few cases in the district has the *malikana* been fixed at a sum equal to the Government revenue. In the plains, the Government and proprietor are supposed to divide the rental equally, but proprietors in Kumaun seldom acquired the rights now possessed by *zemindars* elsewhere, while the cultivators are really proprietors, even when styled permanent tenants.

The commutation of the varying dues, fees, and perquisites to a fixed charge on the revenue must prove a great boon to the cultivators in freeing them from vexatious interference and rendering their position more secure and independent.

In para. 29 of the Board's review, the view is taken that different principles of calculation were applied in working out the assumed assets, according as a village was held by proprietors or by permanent tenants; but this view would appear to be a mistaken one founded on a misapprehension of the Commissioner's explanation of the system.

The revenue was calculated in the same manner in all cases, but tenants paid 25 per cent. more than proprietors; and where 25 per cent. on the revenue was held insufficient for the proprietor, the addition required was generally obtained by a reduction of the revenue.

This reduction was the subject of correspondence with the Government of India in 1874, when objection was taken to it on the ground that in no instance should *malikana* exceed 10 per cent. of the Government demand. But the fact is, that there is no analogy between the *malikana* allowed to the talúqdar on the demand paid by the under-proprietors of a plain's village, and the allowance assigned to a proprietor of a hill village. The cultivators in such a village are really tenants with peculiar rights, and the total demand they pay is really rent, of which 25 per cent. is the proprietor's share, while the rest is the Government demand. The proprietor's share might be 50 per cent. without infringing the general principle of assessment of the Government demand.

27. Somewhat similar to the reductions thus made in the revenue to add to the proprietor's *malikana* were those made to increase the *thokdar's* allowances.

On the conquest of the province, the revenue was collected through *thokdars* or *syanas*, and many of these were men of considerable influence and position; but in time it was found that the *thokdars* abused their position, and in 1856, on the representation of the district officers (Mr. Strachey and Captain Ramsay), Government ruled that *thokdars* should, so far as possible, be dispensed with, and that those who could not be dispensed with should, at the settlement, receive a percentage on the revenue of their *syanchari* villages.

In the Garhwál settlement, it appears from para. 29 of Mr. Beckett's report that *thokdars* were done away with whenever possible, and that those who had to be upheld were, in place of the existing irregular cesses, paid by a percentage of 3, 6, or 10 per cent. on the revenue.

The Commissioner then held the same view, writing :—

“ Mr. Beckett took the greatest pains to carry out the spirit of the Government orders of 1856, and to ascertain and decide who, amongst the holders of *thokdari* pattas, were parties really entitled, by prescriptive rights, to be considered proprietary superiors, who were only the creation of Mr. Traill's later years, or of his successor's, brought into existence by the supposed necessities of village police duties, now no longer required at their hands.”

Mr. Beckett would appear to have acted on the same principle in Kumaun, but meantime the Commissioner had altered his opinion.

“ I have been compelled to change my views. The people have altered so much since 1856, that it was absolutely necessary to maintain *thokdars*, as far as possible, to ensure the due performance of police duties on the part of *padhans* ; and I saw that the abolition of the office of *thokdars*, which had existed so long, would be very unpopular with all except the democrats, who, more than others, required to be kept in check. I accordingly represented to the Board and Government the necessity of keeping up all the old *thokdars*, and His Honor authorized me to do what I considered necessary.”

The percentages fixed were the same as in Garhwál, but in that district *thokdars* were done away with, so far as possible, and in Kumaun they were retained, as far as possible.

“ As all the settlements had been completed before these *thokdari* claims were recognized, I directed the settlement officer to deduct the amount from the Government demand. In reality, if the *thokdars* had been given dues at first, the Government jummas would have been so much less ; and the fact of the extra *thokdari* dues having been given at the end, instead of during the settlement, makes no difference in the *jumabandi*. The sum required to meet these dues was Rs. 2,156-4-0.”

The cost is not great, and part must, in any case, have been incurred, as it would have been necessary to retain some of the *thokdars*, even had the same policy been followed as in Garhwál, and no other cost is incurred for police duties, in rural Kumaun, except in so far as the pay of the *patwáris* may fairly be in part debitable to police work.

28. The *patwáris* are paid from the cess levied, as in Garhwál, at 10 per cent., on the revenue, and applied to education, district post, and *patwári's* pay. Previous to settlement, there were 42 *patwáris* borne on the tahsíl establishments and paid at the inadequate rate of Rs. 5 a month. The imposition of the cess has enabled the number to be raised to 92, the new men, paid entirely from the cess, receiving Rs. 10, and from the cess an allowance of Rs. 5 per month extra is made to those of the old *patwáris* who are qualified by a knowledge of survey work ; so that now all competent *patwáris* receive a monthly salary of Rs. 10.

As this cess has now been levied for the first time and is taken in addition to the land revenue, the real enhancement in the payments of the occupant communities comes to nearly 90 per cent. on the former revenue.

29. In the Bhot parganas of Johar Dharma and Beyans, the assessment partakes rather of the nature of a poll tax than of land revenue.

There is very little cultivation, and these tracts are deserted in the winter months, but for six months the Bhotias graze their cattle and sheep in these parganas, occupy them to the exclusion of others, and carry on a remunerative trade with Thibet. The revenue is fixed on the profits generally and is annually distributed by the people themselves. The system of assessment is the same as that followed in the case of the Bhot parganas of Garhwál, where the action of the settlement officer was approved by Government and held to have been judicious and in accord with the traditions of the people.

30. A small tax, varying from one to three rupees per annum, has been imposed on all water-mills. The Commissioner urged that this income should be devoted to local purposes, and mentions some of the objects to which the income might be applied. It appears, from appendix 20, that 4,634 mills have been taxed, the annual income coming to Rs. 10,304, giving an average of Rs. 2-3-7 per mill. The income is liable to fluctuate: a similar tax was also imposed in Garhwál, and has been hitherto paid to Government.

The Commissioner's proposal was submitted to the Government of India, with a recommendation that it be approved, and was finally sanctioned, subject to report after ten years, by letter from the Secretary, Government of India, Revenue, Commerce, and Agricultural Department, No. 414, dated the 5th July, 1878,

31. The measurements were commenced by Mr. Bazett Colvin, but he soon left Kumaun, and the settlement was virtually carried out entirely by Mr. Beckett, though he was compelled by ill-health to take leave during the work, and had only just completed the settlement when his health again broke down, and he had to take leave before he could submit his final report.

Both the Commissioner and the Senior Member of the Board speak in high terms of the labour and devotion to his work displayed by Mr. Beckett. "The Senior Member is aware that His Honor does not require to be informed of Mr. Beckett's merits as a public officer, or of the difficult and arduous character of settlement work in a country like Kumaun. But he must express his most hearty concurrence in General Ramsay's estimate of Mr. Beckett's labours, of which the amount of the land revenue, the result of his assessment, would furnish a very inadequate idea."

In this commendation His Honor fully concurs.

32. The total cost of the settlement was about Rs. 3,24,500, which has been almost recouped by three years' increase in the demand. It is not excessive for the work done in return; there has been obtained a correct record-of-right, which did not exist in any shape before.

33. The Lieutenant-Governor has no hesitation in deciding that the assessment should be confirmed for 30 years, from the date of settlement, subject to the approval of the Government of India, which will now be applied for.

C. ROBERTSON,

Secy. to Govt., N.-W. P. and Oudh.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Secretary to the Board of Revenue, North-Western Provinces, for the information of the Senior Member, with reference to his letter No. 1795N., dated the 14th September, 1875.

Ordered also, that a copy of this Resolution, and of the Settlement Report, be forwarded to the Secretary to the Government of India, in the Home, Revenue, and Agricultural Département, with the recommendation that the confirmation of the settlement be approved.

By order, &c.,

F. BAKER,

Offg. Under-Secy. to Govt., N.-W. P. and Oudh.
